Figure S1. Pharmacokinetics of chemicals tested in rats after oral administrations. Mean plasma concentrations normalized by doses (1.0 mg/kg) in three male Sprague-Dawley rats are shown after oral administrations of 2-aminobiphenyl, 2-mercaptopbenzimidazole, 5-(p-tolyl)-1H-tetrazole, bromobenzene, and p-toluic acid. This preliminary study was approved by the Institutional Animal Care and Use Committee of Showa Pharmaceutical University.
