Supplemental information

Gypenoside L, isolated from *Gynostemma pentaphyllum*, induces cytoplasmic vacuolation death in Hepatocellular Carcinoma Cell through ROS-mediated unfolded protein response
Supplementary figure 1 Spectroscopic data of Gyp-L.
Supplemental figure 2. A) HepG2 and SMMC-7721 cells were treated with Gyp-L (60 μg/ml) for indicated times and cell lysates were subjected to western blot assay for p62 and LC3-II. B) The cells were treated with Gyp-L (60 μg/ml) in the presence or absence of 3-MA (10 μM) for 24 h and total proteins were extracted and analyzed using western blot.
