Visualization and classification of amyloid $\beta$ supramolecular assemblies

Hisashi Yagi, Tadato Ban, Kenichi Morigaki, Hironobu Naiki, and Yuji Goto

Figure S1. A large number of A\beta(1-40) worm-like fibrils on the same quartz slide. Spontaneous fibrillation of A\beta(1-40) at pH 7.5 in the presence of 0.5 M NaCl and 0.5 mM SDS was monitored by TIRFM. (a-i) A large number of elongated worm-like fibrils with occasional branching were observed at many part of the same quartz slide. The scale bar represents 10 $\mu$m.
Figure S2. A large number of Aβ(1-40) spherulitic structures under the same quartz slide. Spontaneous fibrillation of Aβ(1-40) at pH 7.5 in the presence of 0.5 M NaCl with 0.5 mM SDS was monitored by TIRFM. (a-i) Large number of spherulitic structures were observed at many parts of the same quartz slide. The scale bar represents 10 µm.
