Instrumentation and Materials

$^1$H NMR (500 MHz) and $^{13}$C NMR (125.7 MHz) spectra were taken on a Varian UNITY INOVA 500 spectrometer. $^1$H NMR and $^{13}$C NMR spectra were obtained in CDCl$_3$ with tetramethylsilane as an internal standard. $^{19}$F NMR spectra were obtained in CDCl$_3$ with fluorotrichloromethane as an external standard. IR spectra were determined on a SHIMADZU FTIR-8200PC spectrometer. TLC analyses were performed on commercial glass plates bearing 0.25-mm layer of Merck Silica gel 60F$_{254}$. Silica gel (Wakogel 200 mesh) was used for column chromatography. The analyses were carried out at the Elemental Analysis Center of Kyoto University.

Unless otherwise noted, materials obtained from commercial suppliers were used without further purification. Xylene and dioxane were dried over slices of sodium. Chloro(1,5-cyclooctadiene)rhodium dimer and PMe$_3$ (1.0 M toluene solution) were purchased from Aldrich. P('Bu)$_3$ was obtained from Wako and diluted to prepare 1.0 M hexane solution. PMe$_3$ and P('Bu)$_3$ were stored strictly under argon.
Experimental Section

Procedure for Sequential Methallylation-isomerization of 4-Methoxybenzaldehyde (1d) (Table 1, entry 4)

[RhCl(cod)]_2 (6 mg, 0.0125 mmol) and Cs₂CO₃ (24 mg, 0.075 mmol) were placed in a reaction flask. Xylene (3.0 mL) and P(tBu)₃ (1.0 M hexane solution, 0.05 mL, 0.05 mmol) were added dropwise. The suspension was stirred for 10 min at room temperature. A solution of homoallyl alcohol 2a (170 mg, 1.0 mmol) in xylene (2.0 mL) and 4-methoxybenzaldehyde (1d, 69 mg, 0.5 mmol) were then added and the mixture was heated at reflux. After being stirred for 24 h, the resulting mixture was poured into water (10 mL). Extraction with hexane/ethyl acetate (5:1) followed by silica gel column purification afforded 3-methyl-1-(4-methoxyphenyl)-1-butanone (3d, 75 mg, 0.39 mmol) in 77% yield.

Procedure for Crotylation of Benzaldehyde (1a) (Table 3, entry 1)

[RhCl(cod)]_2 (6 mg, 0.0125 mmol) and Cs₂CO₃ (24 mg, 0.075 mmol) were placed in a reaction flask. Dioxane (3.0 mL) and PMe₃ (1.0 M toluene solution, 0.05 mL, 0.05 mmol) were added dropwise. The suspension was stirred for 10 min at room temperature. A solution of homoallyl alcohol 2b (170 mg, 1.0 mmol) in dioxane (2.0 mL) and benzaldehyde (1a, 53 mg, 0.5 mmol) were then added and the mixture was heated at reflux. After being stirred for 8 h, the resulting mixture was quenched with water (10 mL). Extraction and purification provided 2-methyl-1-phenyl-3-buten-1-ol (7a, 48 mg, 0.29 mmol) in 58% yield (erythro/threo = 49:51).
Characterization Data.

$^1$H NMR spectral charts for known compounds and 1f were attached in the last part. Characterization data for new compounds were shown below.
