

Rate of Access to the Binding Sites in Organically Modified Silicates
2. Ordered Mesoporous Silicas Grafted with Amine or Thiol Groups

Alain Walcarius, Mathieu Etienne, and Bénédicte Lebeau,

Supporting Information

The figure on the next page depicts XRD patterns (left) and Nitrogen adsorption-desorption isotherms (right) for samples MCM-41(A), MCM-41(B), MCM-41(C), SBA-15, and MCM-48, prior to grafting with the organosilanes. XRD experiments were performed after surfactant extraction. Nitrogen sorption isotherms contain both the adsorption (■) and desorption (□) branches.
