Note. Maximum score noted in each column header. AQ = Aphasia Quotient; Info. = Information; Spont. = Spontaneous; AV Comp. = Auditory Verbal Comprehension; Rep. = Repetition; Comp. = Comprehension; Comm. = Commands; CND = could not determine, although test was attempted*; DNT = not test.

* If patients were unable to complete any portion of the WAB testing, whether that was secondary to motoric limitations or, more often, fatigue, a WAB could not be calculated. For the Apraxia of Speech Rating Scale and articulation error score, this indicates a patient did not produce enough speech to validly and reliably score these measures.
