Supplemental Material S1. Intrarater and interrater reliability for spoken language codes.

	Word count	Utterance count	CIUs	Repetitions	Pauses
TH intrarater	—	—	—	.94	.98
RA1 intrarater	.99	.91	.99	—	—
RA2 intrarater	—	—	—	.87	.98
Interrater	.99	.80	.99	.83	.94

Note. Intrarater and interrater reliability were measured using Pearson's correlations. All intrarater reliability measures were obtained by having the primary coder(s) recode a random selection of 20% of the samples. Interrater reliability was also based on a random selection of 20% of the samples. CIUs = correct information units; TH = first author; RA1 = undergraduate student research assistant; RA2 = graduate student research assistant.
