

Supplemental Material S1. Procedural reliability: Intervention.

- Symbols are rotated to prevent position bias
- Greeting 1
 - Investigator greets participant to promote small talk
 - Investigator responds to participant *OR* cues were given systematically (3 sec time delay, verbal cue, gestural cue, physical guidance, error correction) by the investigator
- Trials:
 - Ten trials are given
 - 4 activities on table in view, but out of reach
 - Investigator asks, "What activity would you like to do?"
 - Investigator waited 30 seconds for participant to respond
 - Investigator hands activity to participant if independently requested using SGD *OR* cues were given systematically (3 sec time delay, verbal cue, gestural cue, physical guidance, error correction)
 - 30 seconds to complete activity was given
 - Investigator asks, "Do you like ___?"
 - Investigator waited 15 seconds for participant to respond
 - Investigator responds to participant *OR* cues were given systematically (3 sec time delay, verbal cue, gestural cue, physical guidance, error correction)
- Probes
 - Four probes total
 - 4 activities on table in view, but out of reach
 - Investigator asks, "What activity would you like to do?"
 - Investigator waits 30 seconds before handing activity to participant *OR* hands activity to participant if independently requested using SGD
 - 30 seconds to complete activity was given
 - Investigator asks, "Do you like ___?"
 - Investigator waits 15 seconds for answer
 - No cues were provided
- Greeting 2
 - Investigator says good-bye to client to facilitate small talk
 - Investigator/unfamiliar responds to participant *OR* cues were given systematically (3 sec time delay, verbal cue, gestural cue, physical guidance, error correction)
- Session included 10 trials of both small talk and requesting
- Data sheet from investigator and observer reached at least 85% agreement
- Four probes were given

Note. SGD = speech-generating device.
