**Supplementary material**

**Table S1.**

Sample size of *Odontesthes argentinensis* collected from Rocha and Garzon Lagoons (RL and GL, respectively), Uruguay, in the months of March and July of 2015. The data are classified as male and female and each category is divided into adults (A) and juveniles (J).

	March				July			
	♂		♀		♂		♀	
	A	J	A	J	A	J	A	J
RL	16	13	19	10	14	7	30	2
GL	17	2	21	6	20	0	24	5
