

# Preliminary analysis of City Climate Plans: Case studies of UK cities and next steps

Subhes Bhattacharyya and Leticia Ozawa-Meida  
Institute of Energy and Sustainable Development  
De Montfort University, UK

6<sup>th</sup> September 2019  
IGES, Japan

The support of the Economic and Social Research Council (ESRC) is gratefully acknowledged through ES/S013547/1 (SDG-Capacities project)

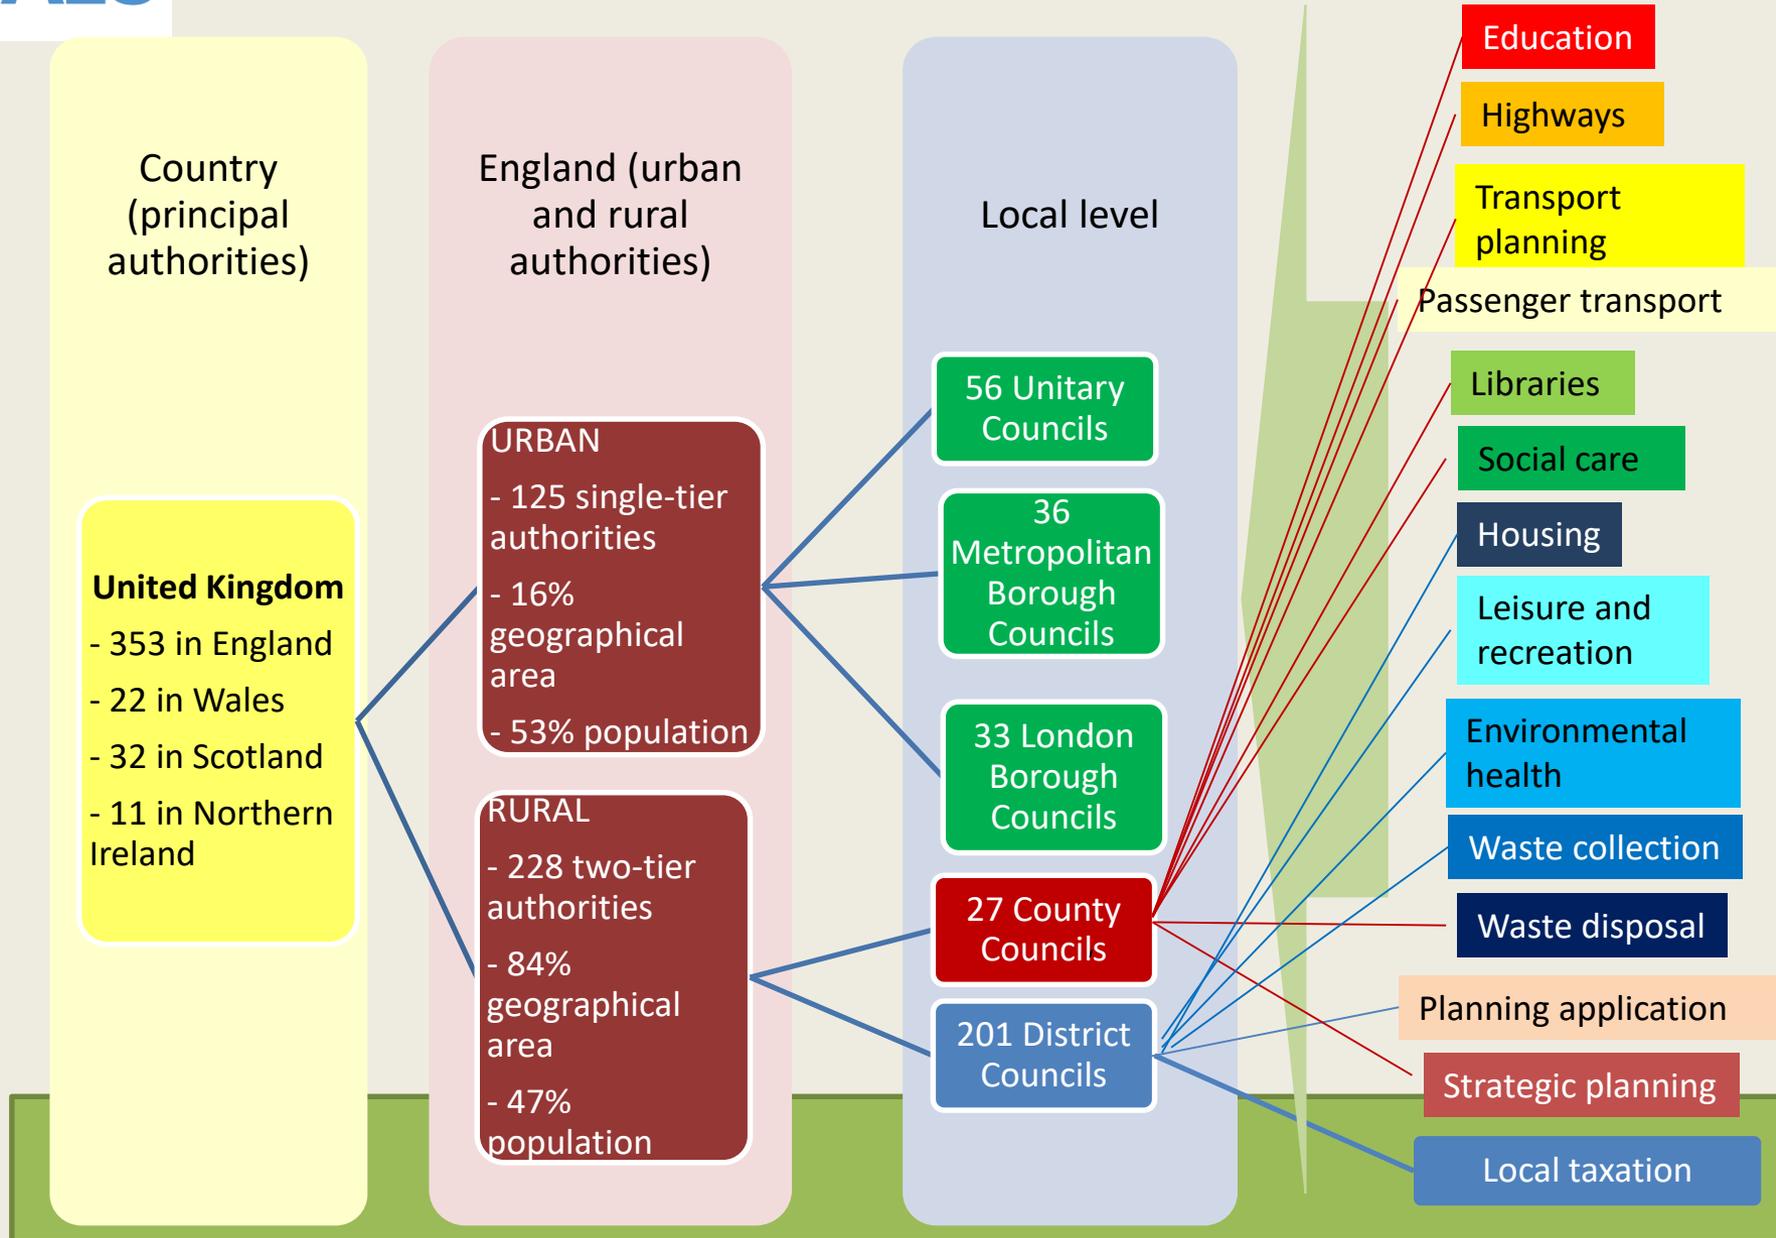

# Aim and objectives

Conduct a preliminary analysis of the integration of the SDGs in the climate action plans of urban areas in the UK

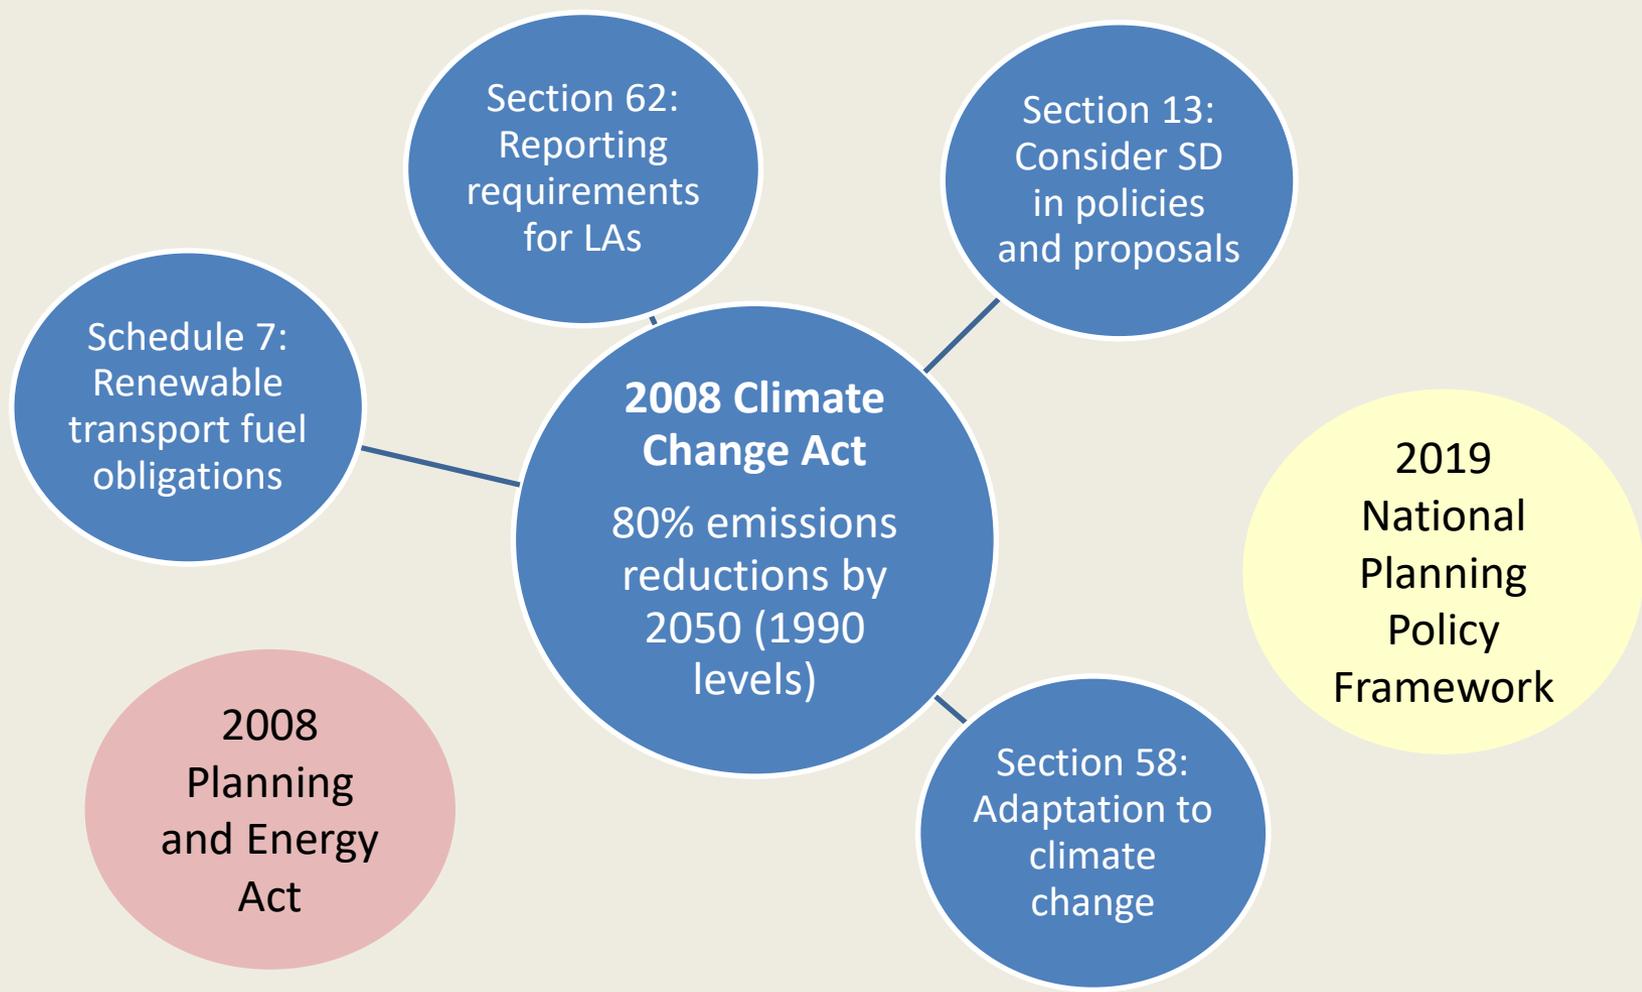

- To identify whether city-level climate actions consider sustainable development of cities
- To explore the alignment of UK cities' climate actions and plans with SDGs

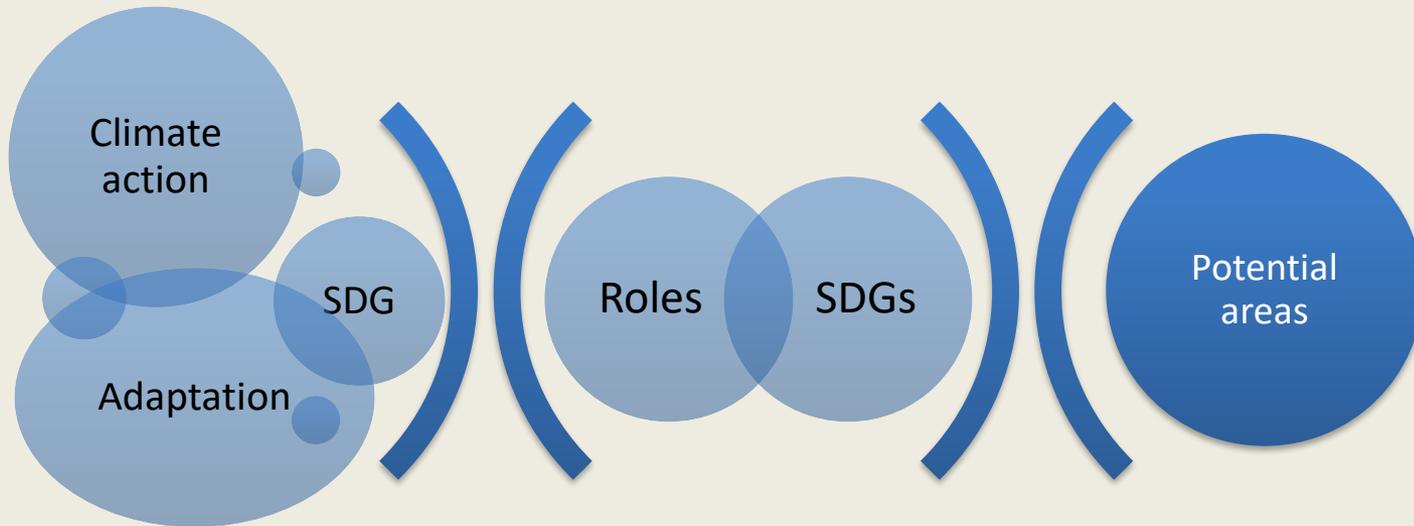

# UK Local Authority background

# Legal and Policy Context

# Methodology

## Text analysis

- Selection of 30 UK local authorities (CoM signatories)
- Systematic analysis of main themes using NVivo (word clouds / word trees, keyword search)
- Selected LAs: Bristol, Nottingham

## Interviews

- Quick scan of local climate mitigation, adaptation and SD plans
- Case studies of selected local cities

## Mapping of Alignment

- Exploring to what extent cities are directly or indirectly influencing the climate-driven SDGs
- Work in progress

# Initial common methodology

- Selection of 30 cities in the UK with Climate Action Plans
  - Population, population growth, geographical position, socio-economic activities, coastal/inland, national recognition (if any)
- Further selection of 6-8 UK cities for text analysis
  - Devolved administrations: Glasgow (Scotland), Cardiff (Wales), Belfast (Northern Ireland)
  - English cities: Manchester, Bristol, Nottingham, Leicester, Milton Keynes

# Case study 1: Bristol

- Population: 457,609 inhabitants (medium size)
- Population annual growth: +1.2%
- Geographical position: Southwest / coastal
- Economic activities: Maritime, modern IT and electronics industry, aerospace, tourism
- European Green Capital 2015

# Case study 2: Nottingham

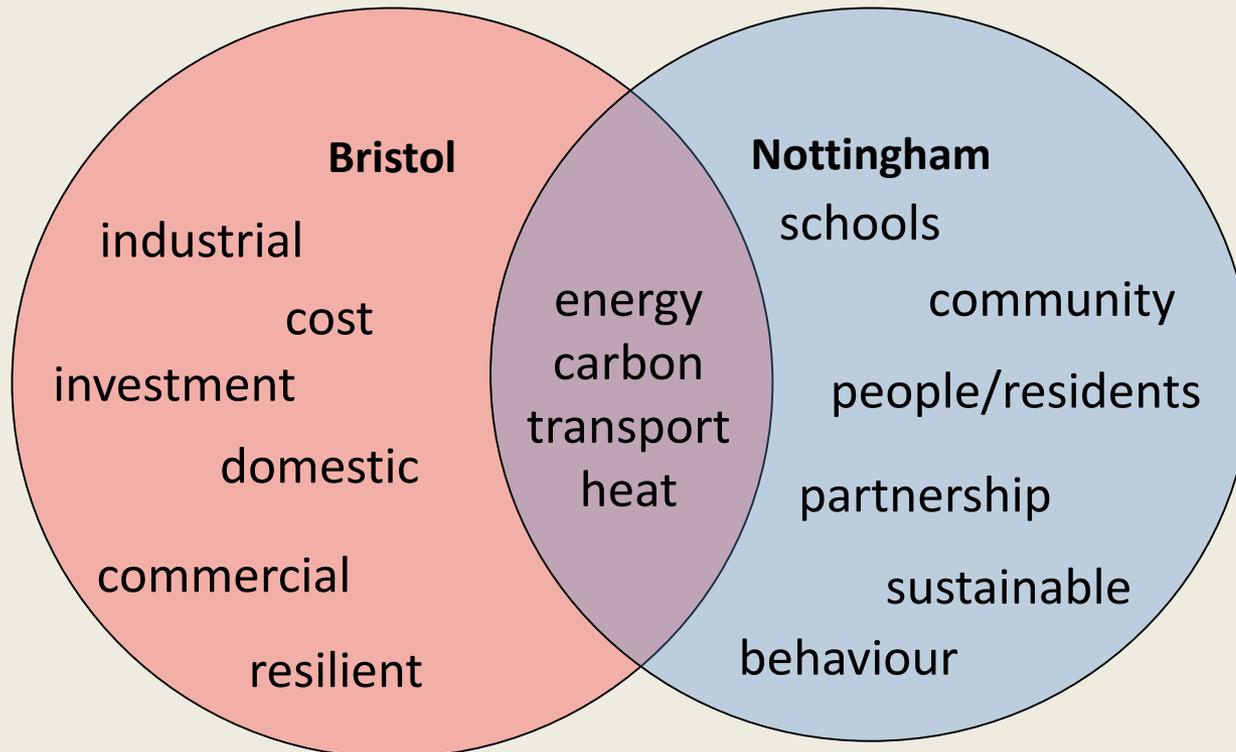

- Population: 326,994 inhabitants (medium size)
- Population annual growth: +1.4%
- Geographical position: East Midlands (central) / inland
- Economic activities: Science-based industry and service sector (main economic driver)
- Social characteristics: High unemployment
- UNESCO city of Literature

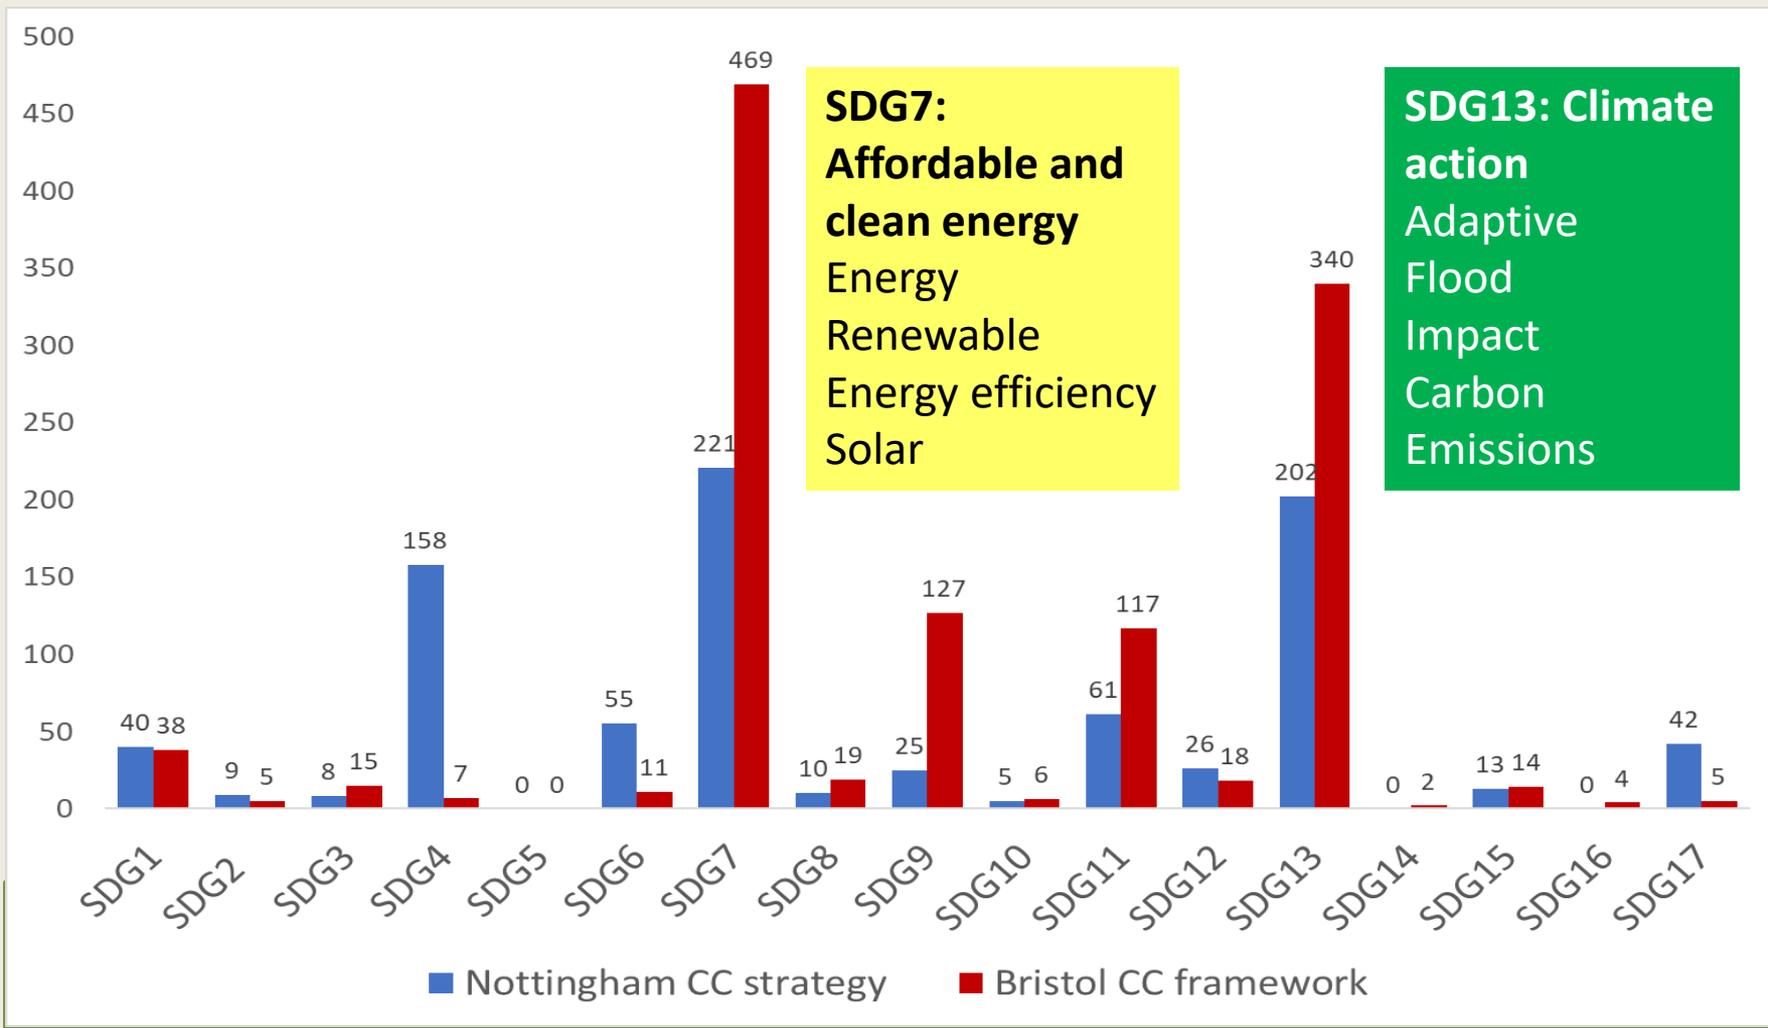

# Text analysis (word frequency)

Comparison of selected cities

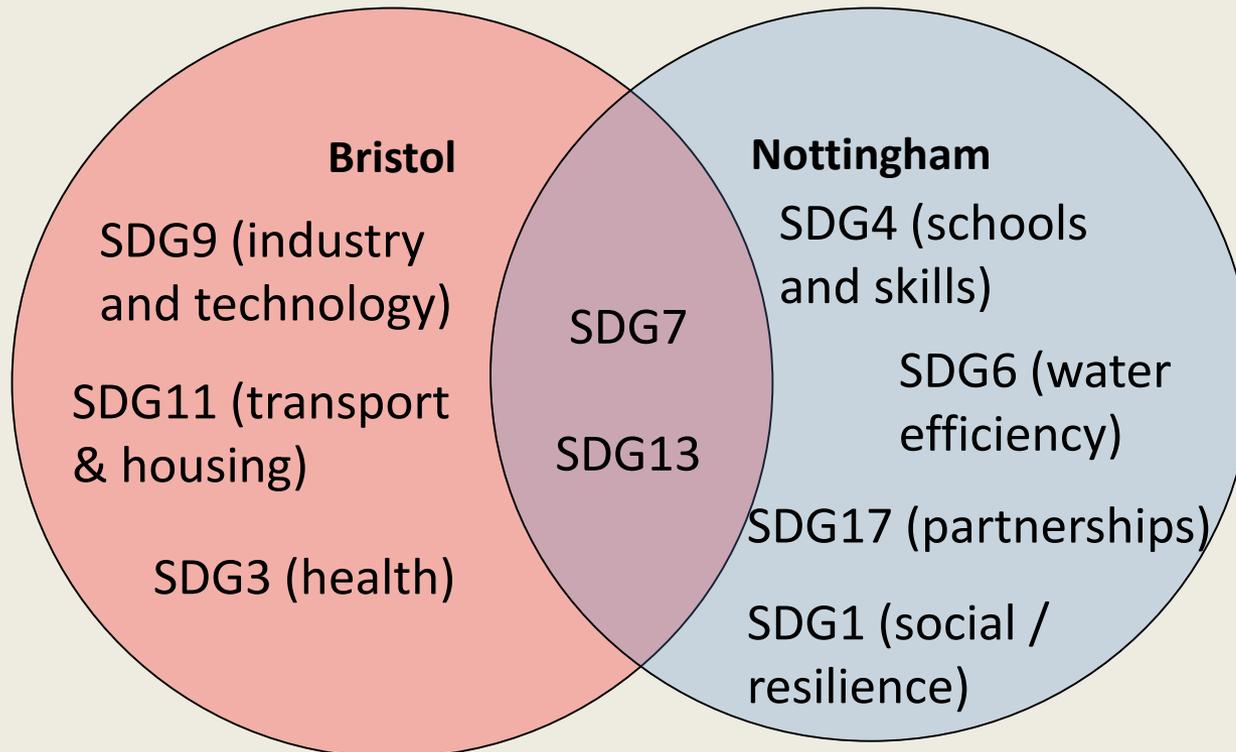

# Initial DMU text analysis

- Selection of 4-5 keywords for each SDG (DMU)

# Text analysis (keywords)

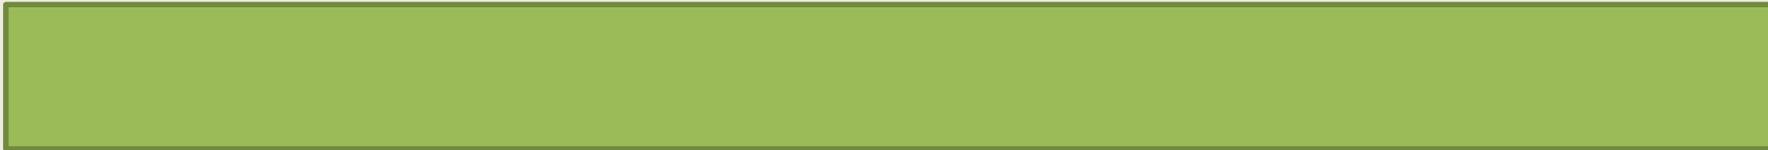

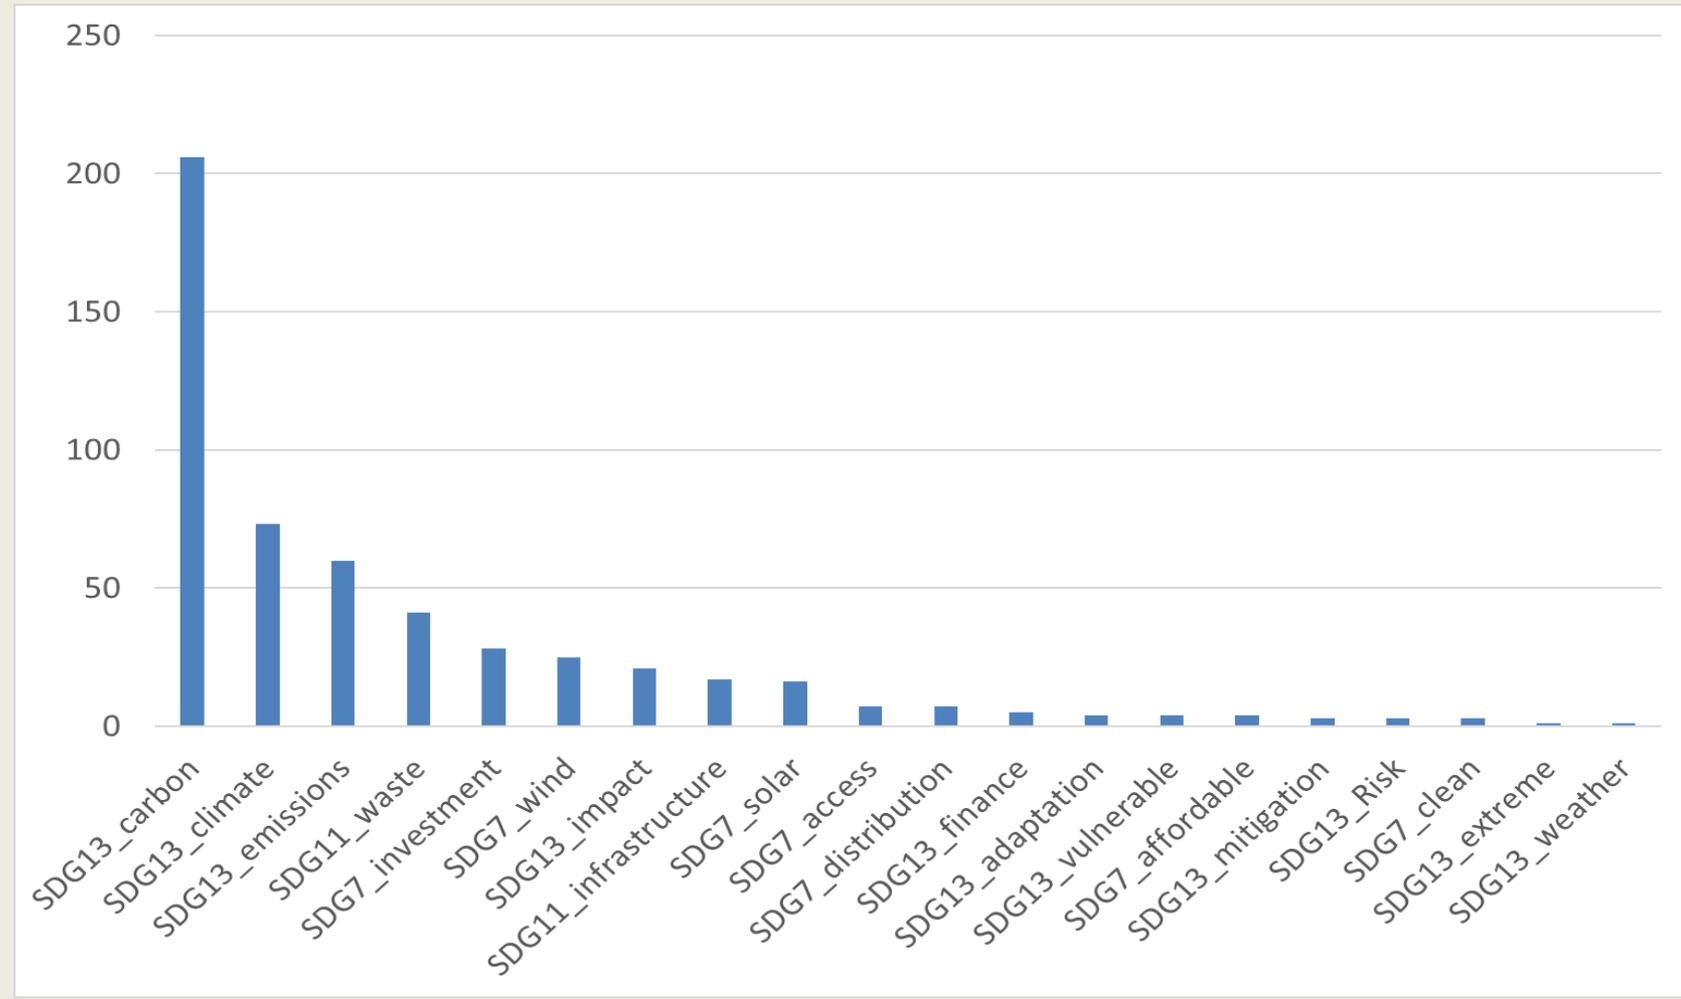

Comparison of selected cities

# Towards a common methodology

- Further text analysis to be able to compare UK and Japanese cities
- Selection of 10 keywords per each SDG (IGES)
  - Based on targets
  - Pros: More comprehensive and less subjective
  - Cons: 170 keywords, no interlinkages considered yet
- For initial common analysis
  - Only focus on SDG13, SDG7 and SDG11
  - Only focus on Climate Action Plans
  - Complemented with interviews (if possible)

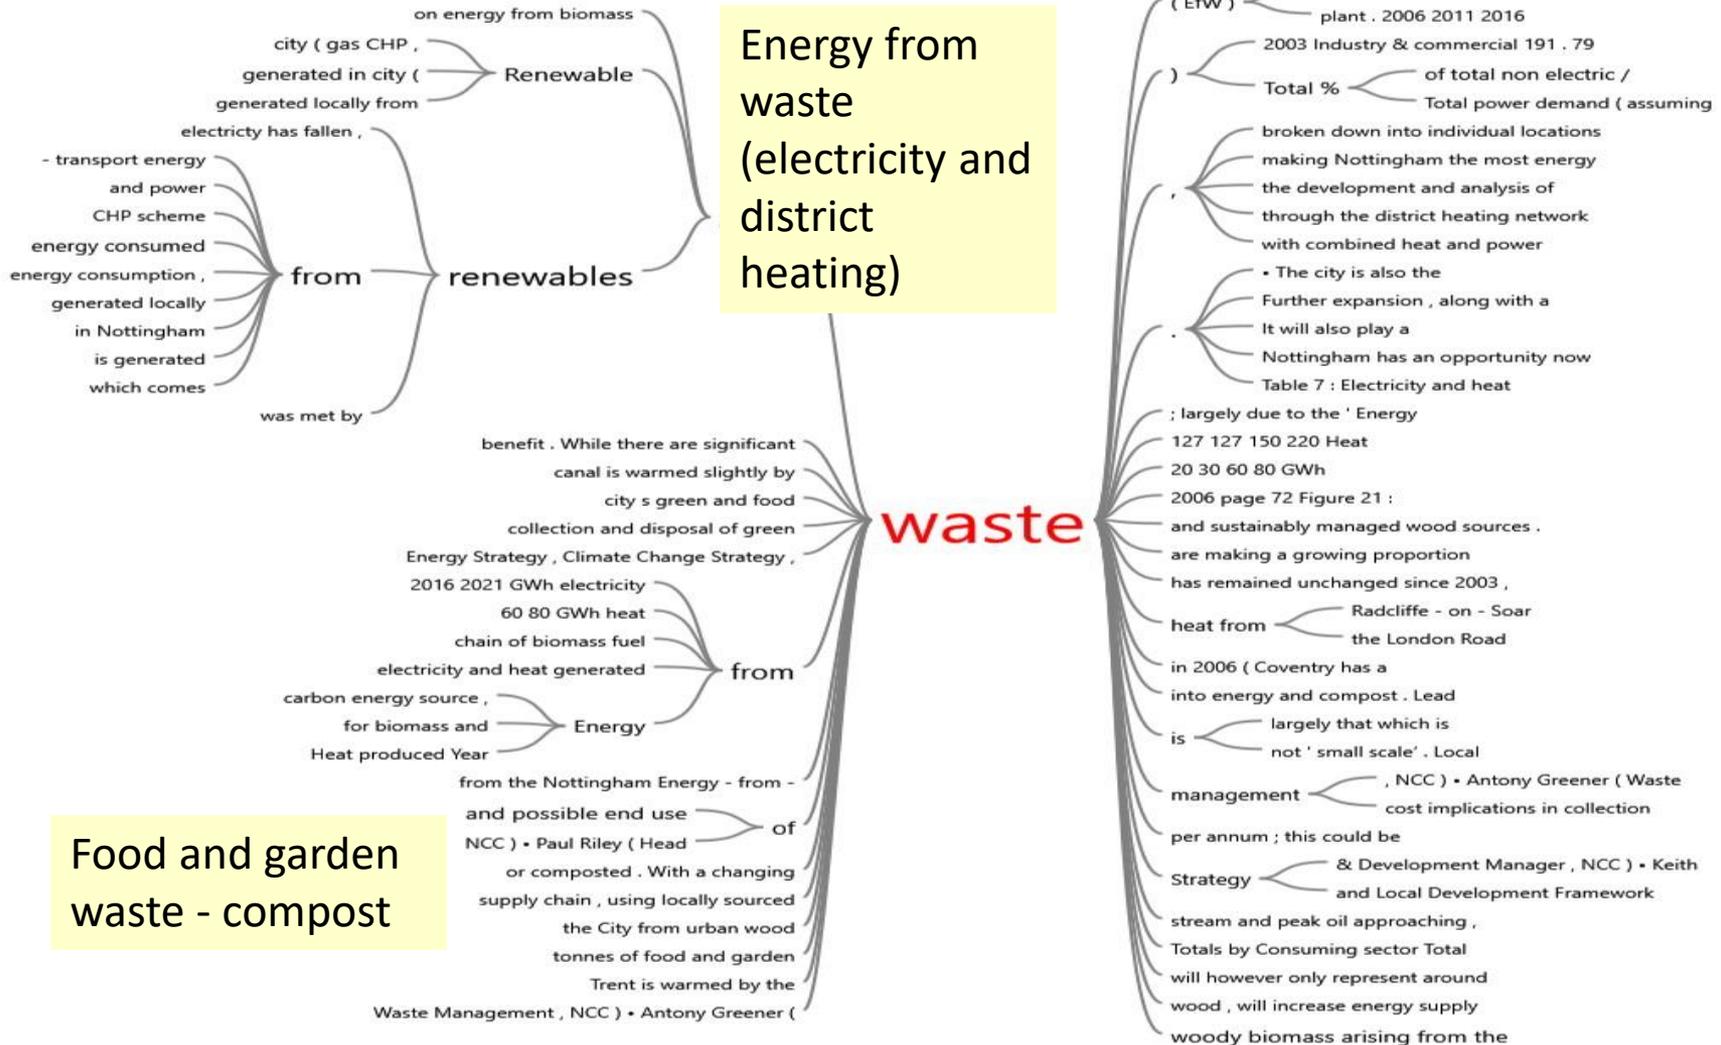

# Nottingham (SDG keywords)

# Nottingham (word tree)

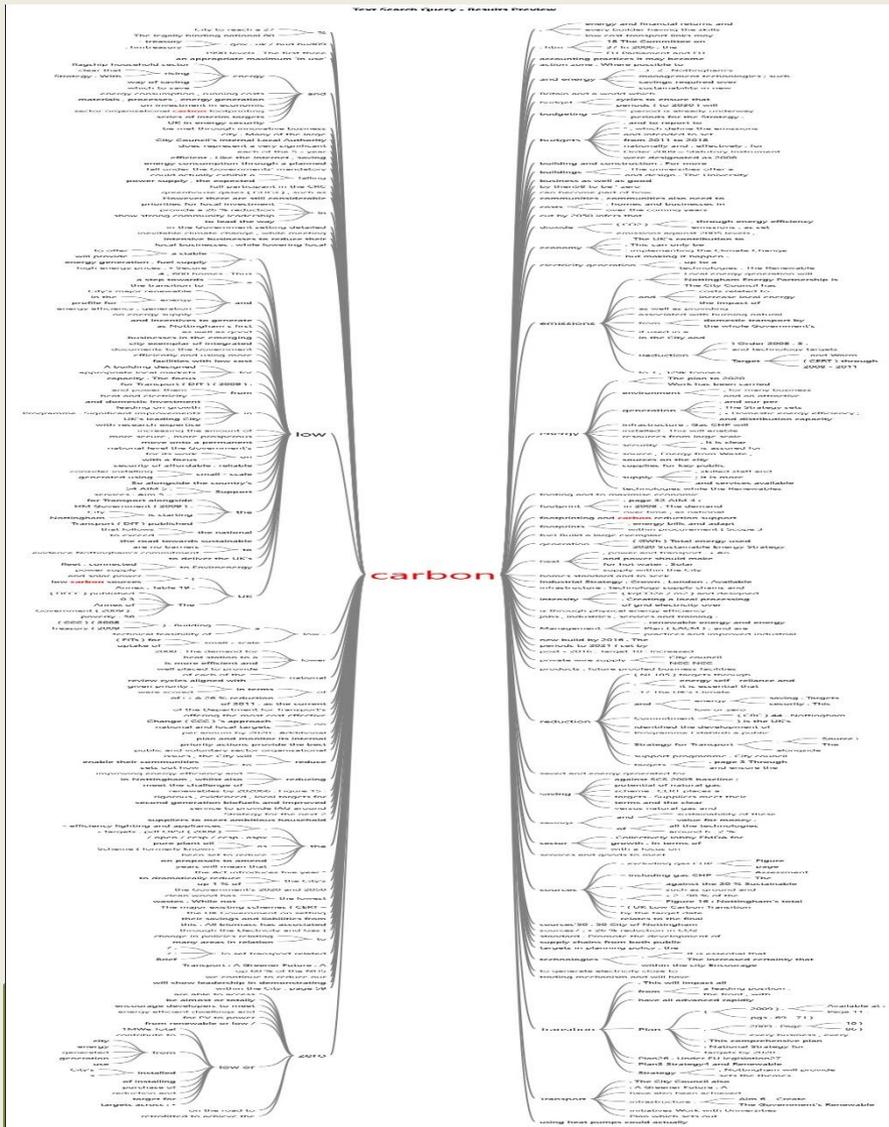

## Example: waste (SDG11)

Text Search Query - Results Preview

# Nottingham (word tree)

## Example: carbon (SDG13)

- **SDG7:**
  - Renewable energy
  - Energy efficiency
  - Affordable, reliable
  - Local generation infrastructure
- **SDG11:**
  - Housing
  - Sustainable transport
- **SDG9:**
  - Infrastructure, technology supply chains
  - Local businesses
- **SDG17:**
  - Universities & voluntary sector

# Nottingham (interview)

## An energy officer (29.08.2019)

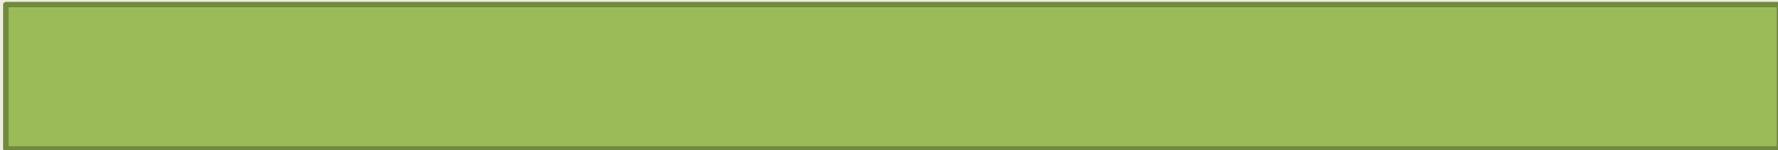

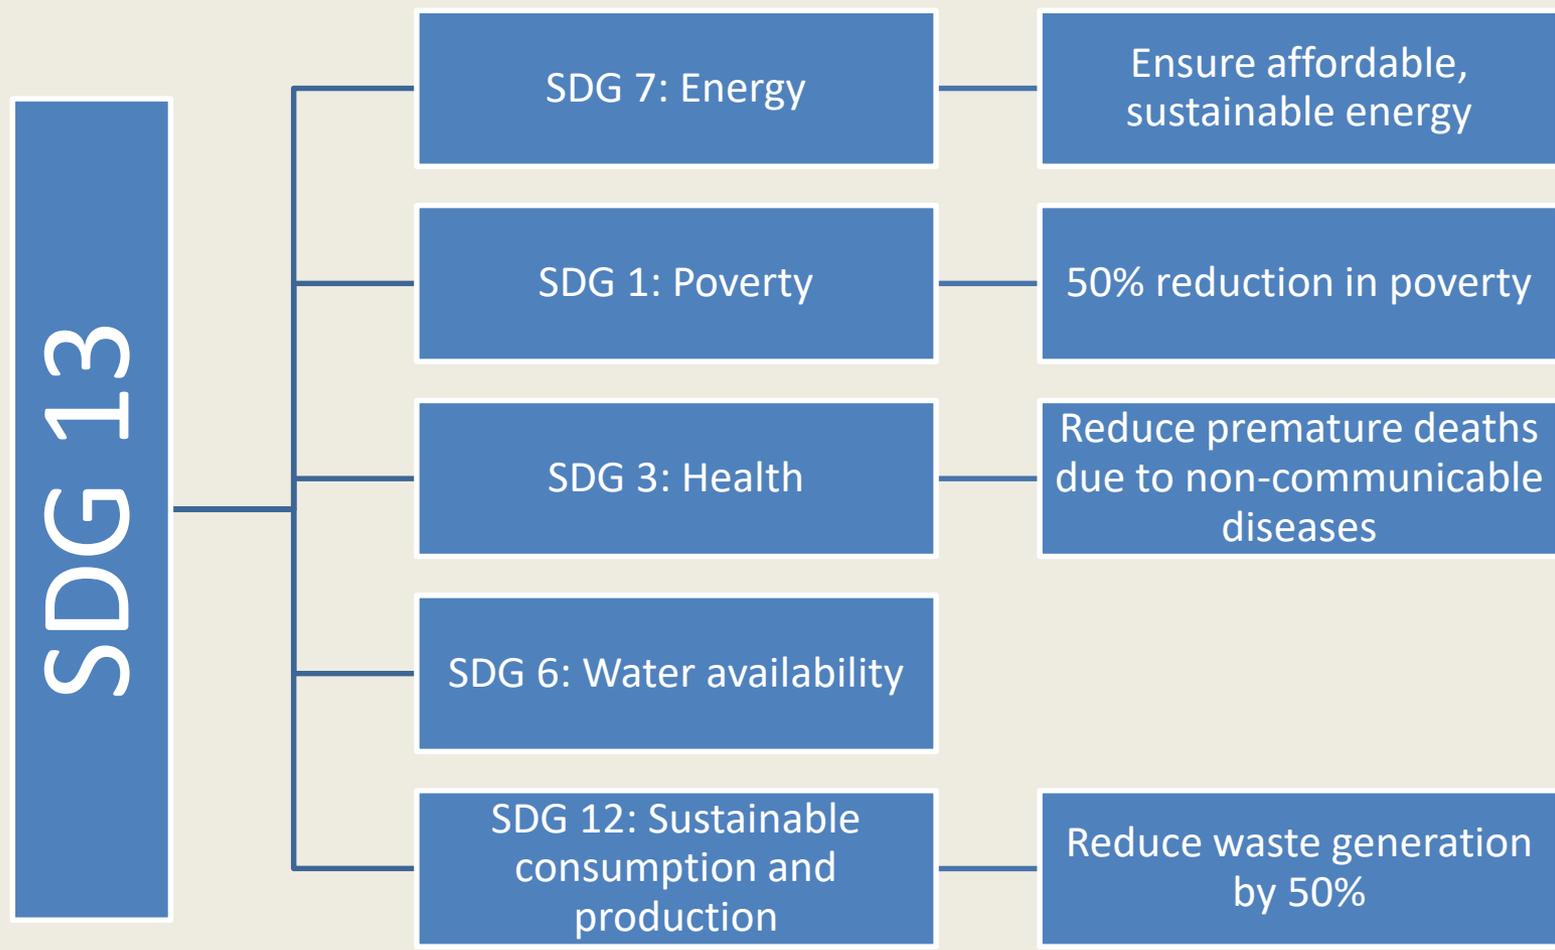

- Climate Action Plan (2010-2020)
- Climate mitigation projects:
  - Low carbon heat (CHP and district heating), smart meters, solar PVs, social housing retrofit, low transport network, deployment of EV charging, tackling fuel poverty, etc.)
- Climate adaptation projects:
  - Green and blue infrastructure (rainwater harvesting and water efficiency), SuDS, flood risk awareness
- Work on SDGs:
  - SDG8: Increasing skills for renewable energy and retrofits through SMEs and housing providers, support to SMEs using Green Funds
  - SDG9: Projects related to the Energy Hub and Industry Strategy working with partners in the Midlands (for example related to energy storage using LEP funding, heat pumps and district heating)
  - Community projects (waste shops – reuse and recycle), local food (reducing food waste but also food miles)

# Nottingham (interview)

## What is next?

- Ambition: Become carbon neutral by 2028
- Goal: Develop a co-benefits agenda
  - Achieving carbon targets considering SD
  - Co-benefit analysis of business cases and business models of carbon neutral projects
  - Interlinkages between different sectors (brining together agendas)
  - Protect and safeguard quality of life and well being of citizens + engagement with people
- Main drivers: cost efficiency, fuel poverty reduction and bringing back revenue for further investment

# SDG Mapping of climate actions

# Next steps

- Text analysis for 6-8 cities each in UK and Japan
- Comparison and ranking of city plans
  - Some criteria to be developed
- Mapping of SDG 13 onto other SDGs
  - Possibility of engaging with stakeholders and doing a ranking exercise
  - Possibility of modelling

# Conclusions

- City Climate Plans in the UK
  - Have mainly focused on climate-related issues
  - Have implicit and indirect links to Sustainable Development Goals
    - Emphasis varies by city depending on the local context
- Cities are planning for deep decarbonisation
- Better alignment with the SDGs could lead to co-benefits.
