

Supplementary Figure S2. *er-105* differential phenotypes in both cotyledon epidermis. Representative adaxial and abaxial epidermis of Col-0 and *er-105* mature cotyledons, with stomata false-coloured in blue. Note the presence of arrested lineages (red asterisks) only in the abaxial epidermis of *er-105*. Micrographs were obtained with the dental resin method. Scale bars are 100 μm .
