

Supplementary Figures 1-5.

Supplementary Figures 1-5. Scatter (A) and Bland–Altman (B-D) plots of the LSS-derived *versus* the best-estimated pharmacokinetic metrics for caffeine (AUC_{0-12h} , Figure 1), fexofenadine (AUC_{0-12h} , Figure 2), midazolam (AUC_{0-12h} , Figure 3), metoprolol (ratio of metoprolol:a-OH metoprolol AUC_{0-12h} 's, Figure 4) and omeprazole (ratio of omeprazolol:5-OH omeprazol AUC_{0-12h} 's, Figure 5). The abscissae in all panels refer to the best-estimated metrics. The ordinates represent the LSS-derived metrics in panels labeled A, and the difference between the best-estimated and LSS-derived metrics in the Bland-Altman plots (panels B - D). The continuous line in A is the identity line. The dashed lines in B – D are drawn at + 1.96 and -1.96 of the standard deviation of the mean difference between best-estimated and LSS-derived metrics. The symbols represent the different LSS models: black squares, 90 and 240 min; red circles, 120 and 240 min; green triangles, 90, 120 and 240 min.

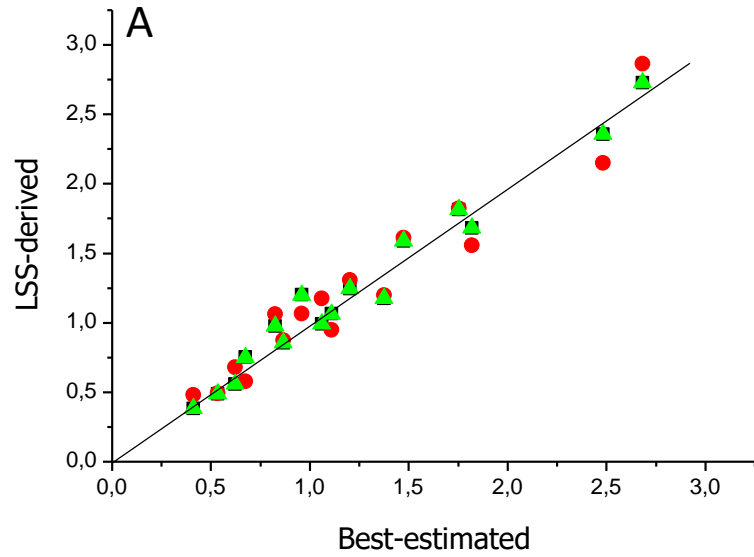

Supplementary figure 1 - Caffeine

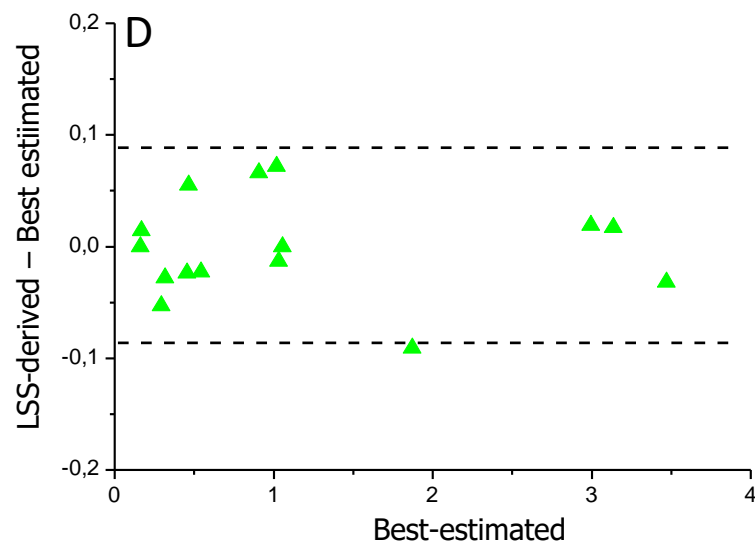

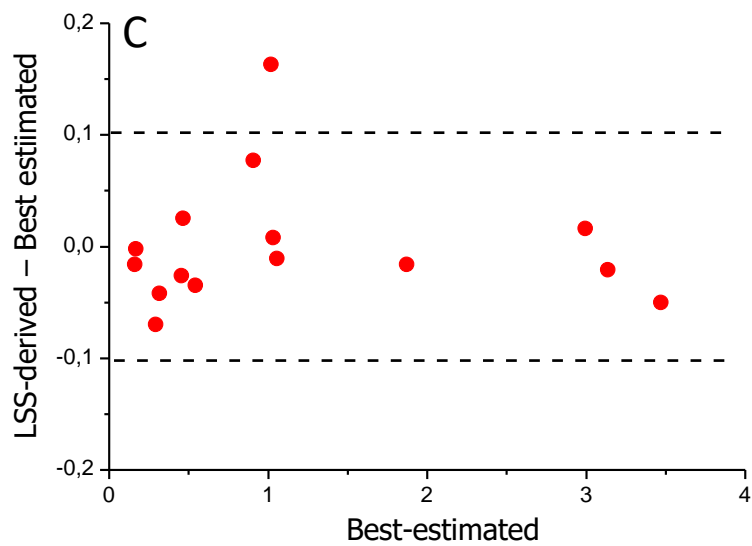

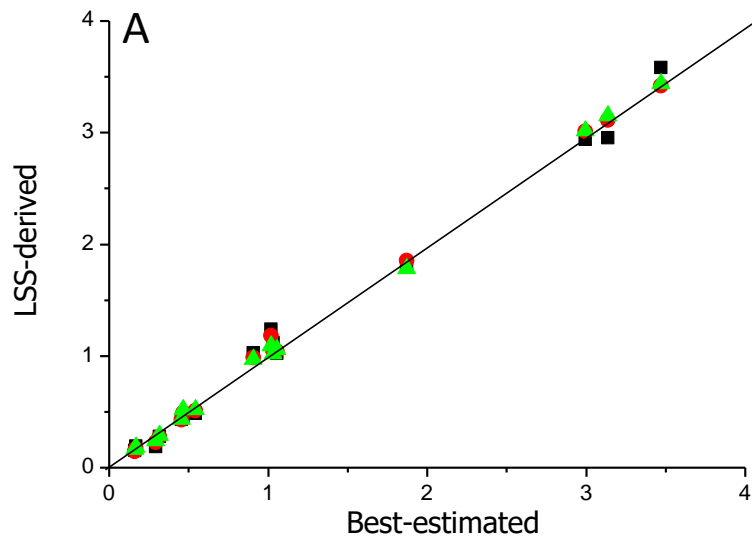

Supplementary figure 2 - Fexofenadine

Supplementary figure 3 - Midazolam

Supplementary figure 4 - Metoprolol: α -OH metoprolol

Supplementary figure 5 - Omeprazole:5-OH omeprazole
