

Figure S6. Nucleotide alignment of *rcd-1* locus from different *Neurospora* species. Colors show conservation with darkest purple corresponding to strong (above threshold of 90% of the sequences) and light purple to weak conservation. Exons encoding *rcd-1-1* and *rcd-1-2* alleles are boxed in green and red, respectively. Sequences encoding partially duplicated *rcd-1-1* exons are boxed with dashed green line.
