

UPR^{mt}ome subset, direct interactors in *C. elegans*

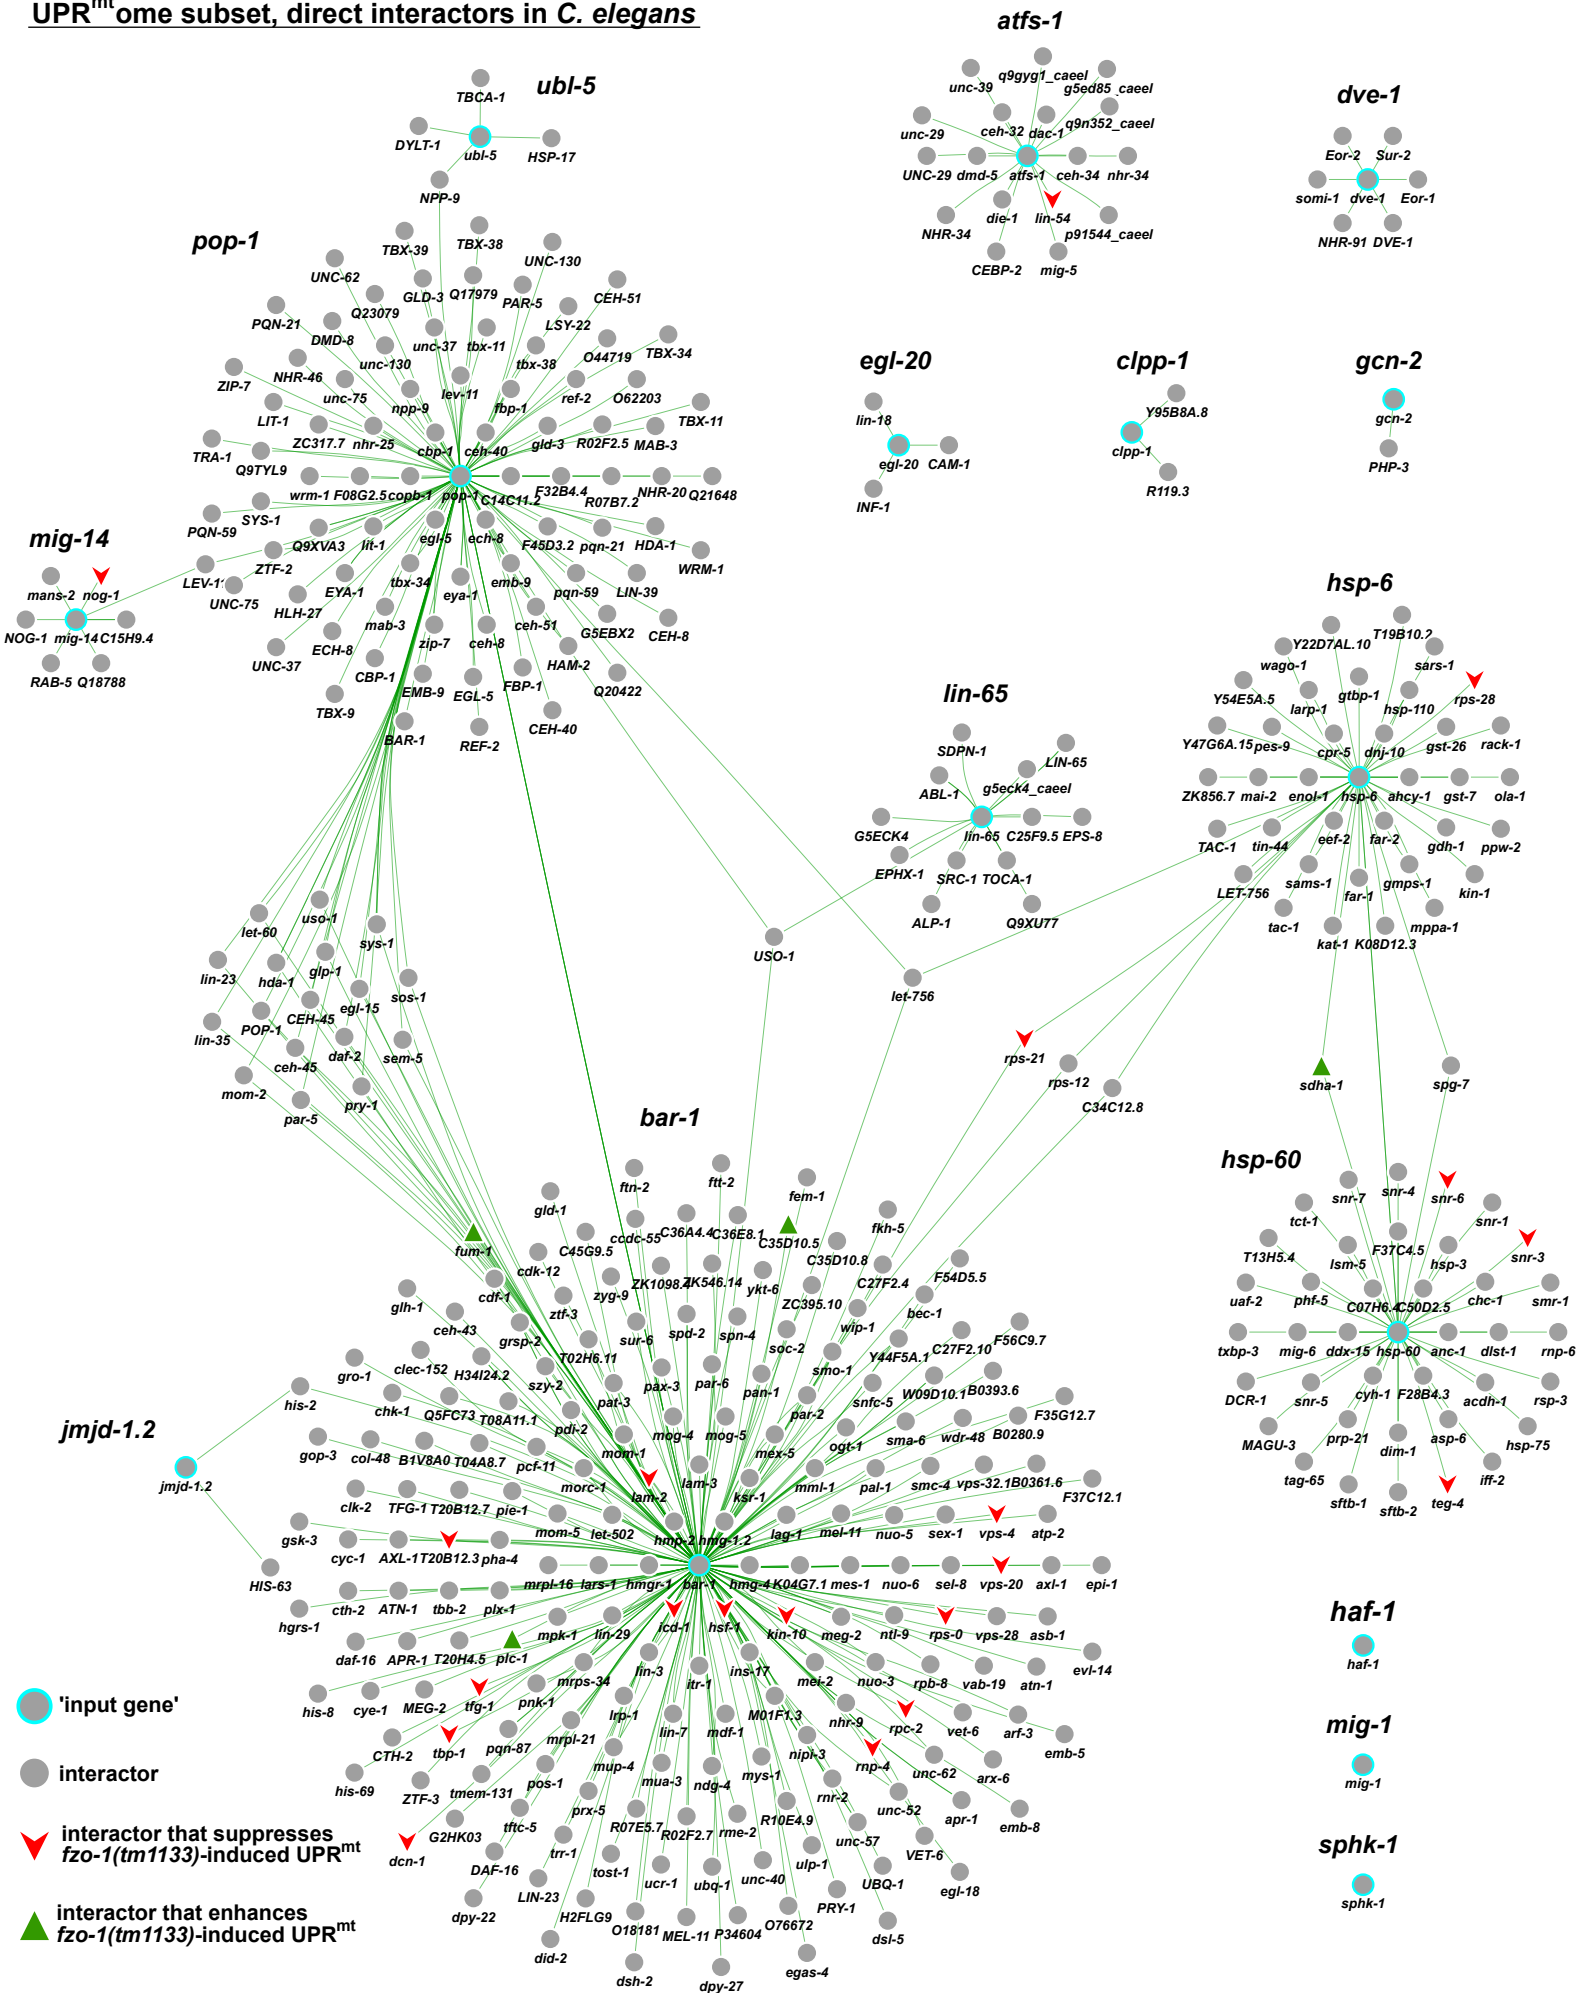

Figure S4: Subset of the UPR^{mt}ome, direct interactors in *C. elegans*. 'Input genes' associated with the GO-term 'mitochondrial unfolded protein response' are indicated by turquoise circles and their interactors in *C. elegans* are indicated by grey dots. Red arrowheads: suppressors of *fzo-1(tm1133)*-induced UPR^{mt} that overlap with the UPR^{mt}ome subset; Green triangles: enhancers of *fzo-1(tm1133)*-induced UPR^{mt} that overlap with the UPR^{mt}ome subset.
