

UPR^{mt}ome subset, interactors of human orthologs

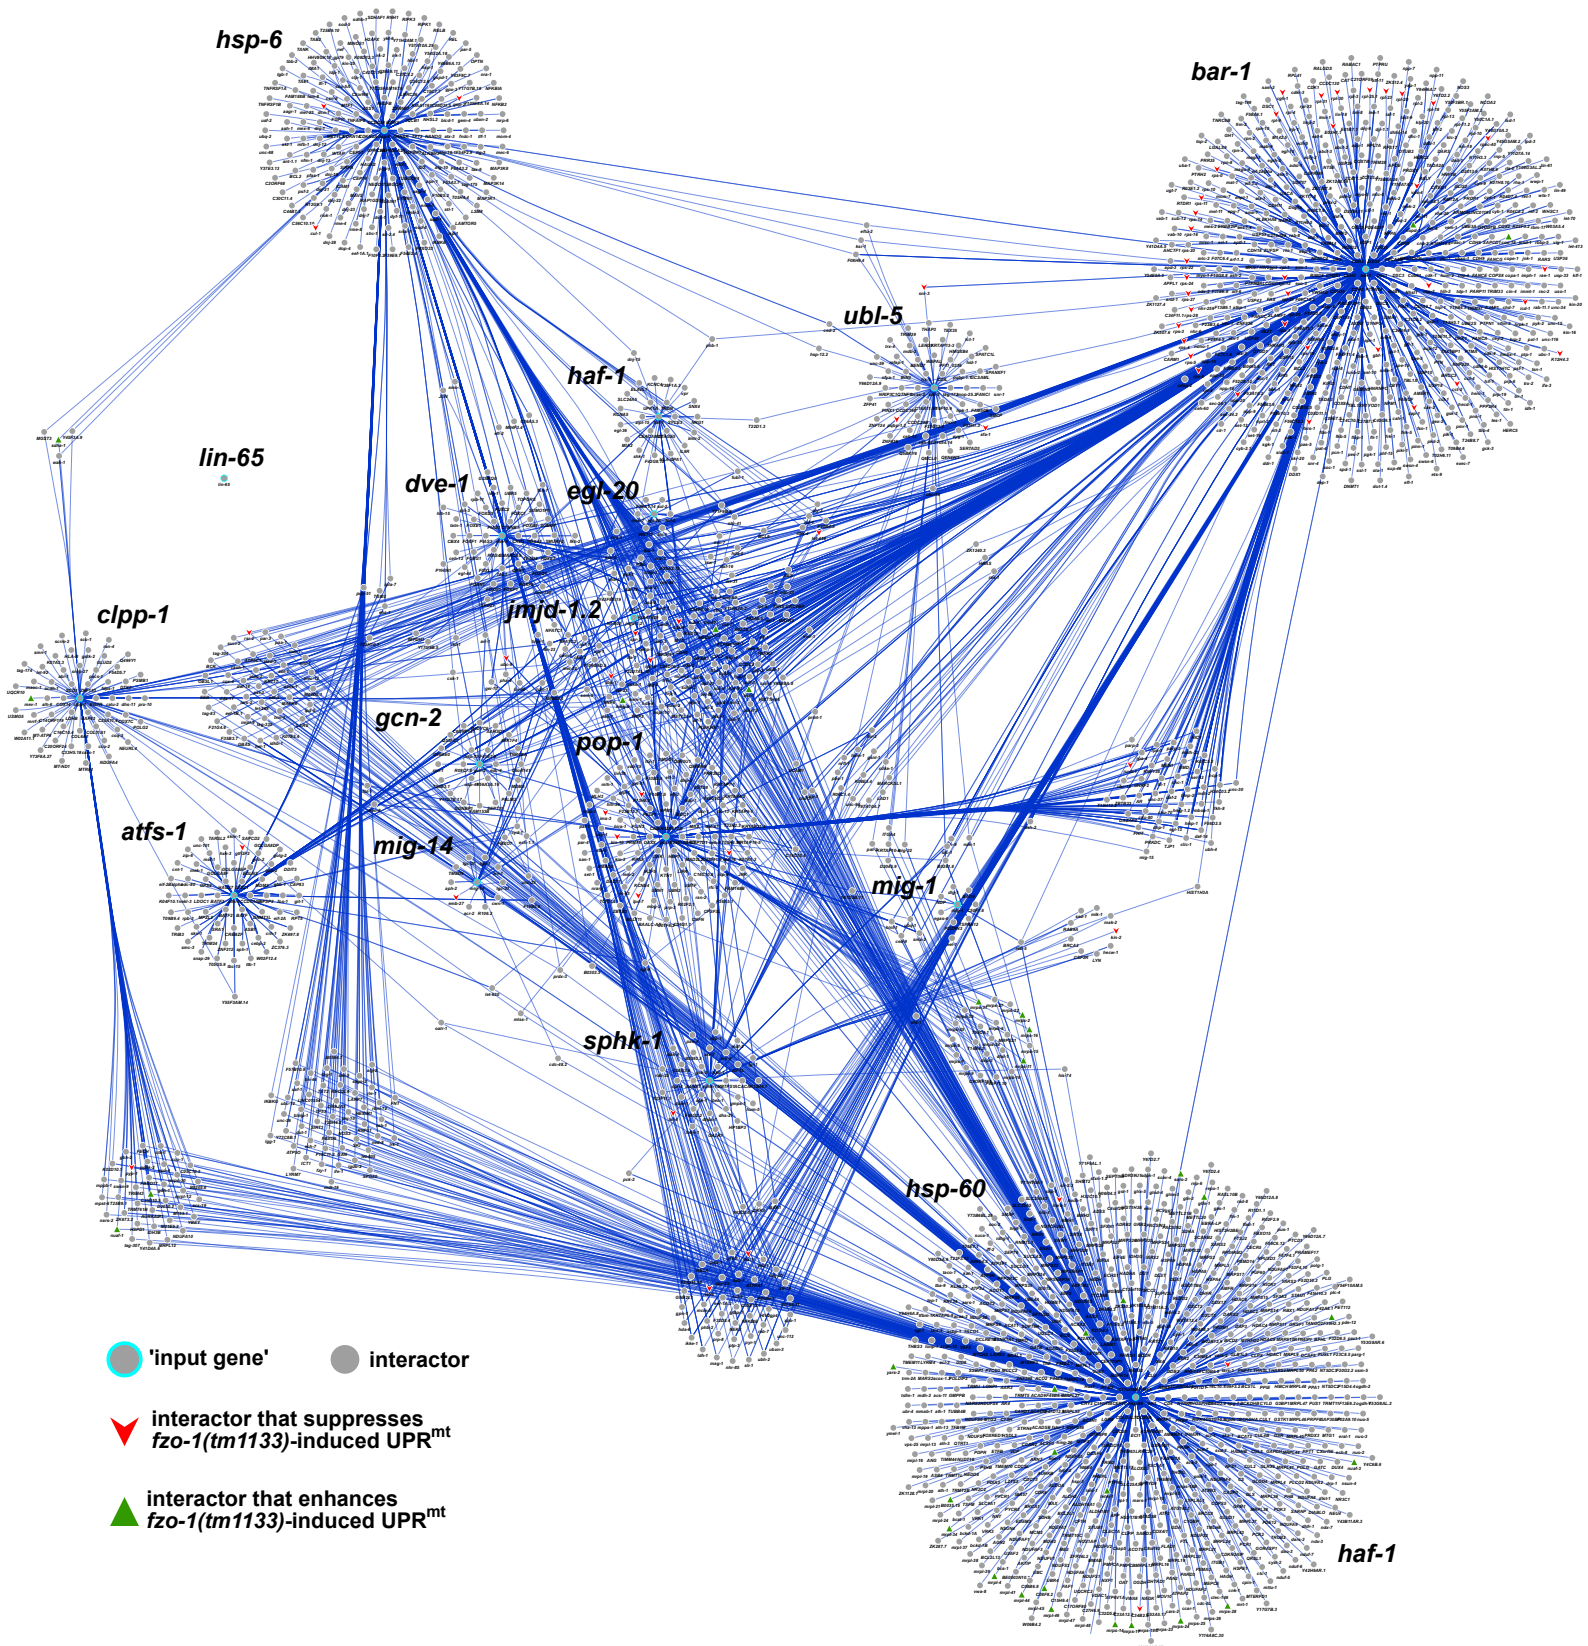

Figure S5: Subset of the UPR^{mt}ome, interactors of human orthologs. 'Input genes' associated with the GO-term 'mitochondrial unfolded protein response' are indicated by turquoise circles and their interactors in humans are indicated by grey dots. Red arrowheads: suppressors of *fzo-1(tm1133)*-induced UPR^{mt} that overlap with the UPR^{mt}ome subset; Green triangles: enhancers of *fzo-1(tm1133)*-induced UPR^{mt} that overlap with the UPR^{mt}ome subset.
