

Suppl. Fig. 1. Expression of genes belonging to 5 groups: phospholipases A₂ (A), eicosanoid's pathway (B), transcription factors (C), cytokines (D), airway remodeling (E) in PBMC of healthy subjects (white bar, n=5) and patients with severe asthma (black bar, n=5) after stimulation with rFel d1 DG (1,25 ug/ml). Data are presented as the mean value of the Log₂ RQ ± SEM.
