

Supplemental Figure 1:

A

B

Supplemental Figure 1: Representative tracings of tumor cell processes after 3 day treatment with or without CNTF. (A) Untreated tumor cell traces and (B) CNTF treated tumor cell traces. Each 4 x 4 figure represents the 16 random views chosen on a single coverslip for tracing. The total process length for each view is noted in the lower right of each tracing, while the total process length for the entire coverslip is noted at the bottom right of the figure. When tracings are displayed by the NeuroLucida program (MBF) the program fills the whole screen with the entire tracing from each view. Therefore, shorter tracings appear wider (or zoomed in), while longer tracings taking up the whole field of view appear thinner (or zoomed out).
