

## Erratum

---

In the paper by Wright D, Akolekar R, Syngelaki A, Poon LCY and Nicolaides KH, entitled 'A competing risks model in early screening for preeclampsia' [Fetal Diagn Ther 2012;32:171-178, DOI: 10.1159/000338470], some amendments should be made.

The corrections are for the following tables:

**Table 2.** Fitted regression model for posited gestational age in weeks at delivery with PE

Age >30 years should be replaced by Age – 30 years, if age >30 years

Weight ≤69 kg should be replaced by Weight – 69 kg

Height ≤1.64 m should be replaced by Height – 1.64 m

**Table 3.** Fitted regression model for  $\log_{10}$  uterine artery PI in unaffected pregnancies

Gestation ≤77 days should be replaced by Gestation – 77 days

Weight ≤69 kg should be replaced by Weight – 69 kg

(Weight ≤69 kg)<sup>2</sup> should be replaced by (Weight – 69 kg)<sup>2</sup>

**Table 4.** Fitted regression model for  $\log_{10}$  MAP in unaffected pregnancies

Weight ≤69 kg should be replaced by Weight – 69 kg

(Weight ≤69 kg)<sup>2</sup> should be replaced by (Weight – 69 kg)<sup>2</sup>.
