

## Erratum

---

The authors of the article entitled 'Do high levels of n-3 polyunsaturated fatty acids in cell membranes increase the risk of postoperative atrial fibrillation?' [Cardiology 2013;126:107-114, DOI: 10.1159/000351432] wish to publish the following two corrections.

- (1) On page 111, left column, second paragraph, lines 5 and 6 should read:  
... higher preoperative levels of DHA (OR = 1.506; 95% CI 1.010-2.246) ( $p < 0.05$ ) ...
- (2) On page 111, right column, the heading of table 3 should read:  
**Table 3.** Multivariable logistic regression analysis of RBC membrane LC-PUFA levels as predictors of POAF
