

Supplementary material for the manuscript “Moose – tree interactions: rebrowsing is common across tree species”. Description of vegetation types in relation to forest productivity. Vegetation types were used as an indication of forest productivity. Productivity class (low/medium/high) were uses in the analysis.

Vegetation type	Forest productivity description (from (Fremstad 1997))	Productivity class used in analysis	Number of plots
Lichen	Very low	Low	179
Heather	Low to medium	Medium	62
Berries	Medium to low	Medium	99
Bilberry	Low to medium	Medium	30
Small fern	Medium to high	High	1
Low herbs	High	High	150
Tall herbs	High	High	10
