Open Pharma position statement on open access

Pharmaceutical companies, which fund approximately half of all biomedical research,¹ are now leaders in the publication and disclosure of research.²,³ However, access to much company-funded research is restricted by journal paywalls.⁴ We, as Open Pharma, a group of pharmaceutical companies and other research funders, alongside healthcare professionals, regulators, patients, publishers and other stakeholders in healthcare, recognize the importance of publishing research with open access, where papers can be read without payment of a one-off access charge or subscription. Open access ensures that the highest quality, peer-reviewed evidence is available to anyone who needs it, anywhere in the world. Publishing with open access improves transparency, advances medical science and, we believe, ultimately improves patient care.

Our immediate priority

Our immediate priority is to secure authors publishing company-funded research the same right to publish open access as authors publishing research funded by other sources, so that all research can be made free to read from the date of publication. This would enable pharmaceutical companies to follow the lead of other research funders in requiring all the research they fund to be published with open access, without impacting on journal choice.⁵⁻⁷ In order to provide publishers the time to adapt their policies and protect their copyright interests, any variant of Creative Commons or equivalent licence could be used.

Our long-term goal

Our long-term goal is to secure authors publishing company-funded research the same terms as authors publishing research funded by other sources, so that all research can be made free to read – and reuse – from the date of publication. This would enable pharmaceutical companies to follow the lead of other research funders in maximizing the impact of the research they fund on patient health. Open Pharma is committed to working closely with publishers and pharmaceutical companies to ensure that the gold standard Creative Commons Attribution (CC BY) licence can sustainably be used.⁸

Acknowledgements

This Open Pharma position statement on open access represents the opinions of the individual members: Catherine Skobe (Pfizer), Chris Rains (Takeda), Chris Winchester (Oxford PharmaGenesis), Julie Newman (Gilead), Lise Baltzer (Novo Nordisk), Sarah Sabir (Oxford PharmaGenesis) and Valerie Philippon (Takeda), and not necessarily those of their individual companies. We thank the members, supporters and followers of Open Pharma for their input and valuable discussion.
