

Figure S3: No effects on HIV-1 LTR transactivation when parental U2OS cells were treated with doxycycline post infection. U2OS cells were infected with 100 ng p24 VSVG pseudotyped HIV-1 NL4-3 IRES-eGFP for 24 h. Thereafter, cells were treated with 1 μ g/ml doxycycline. Additional 24 h later cells were analyzed by flow cytometry for the % and MFI of GFP+ (HIV-1-infected) cells. The graph shows mean values and standard deviations of three independent experiments.
