

Supplemental Appendix Table 1. Hazard Ratios for the effect of dropout on incident pregnancy among young women aged 13-23, enrolled in HPTN 068 from 2011–2015 excluding girls who are pregnant at baseline or first visit (N=2105)

	Unweighted		Weighted	
	HR	95% CI	HR	95% CI
Dropout on pregnancy				
Total				
Dropout	7.17	3.80, 13.52	5.26	2.72, 10.18
No dropout	1	1	1	1
Low attendance	4.91	2.97, 8.11	3.92	2.34, 6.57
High attendance	1	1	1	1

Abbreviations: CI, robust confidence intervals; HR, hazard ratio

^a Weighted models conditioned on the following covariates: age at baseline, alcohol use, baseline depression, having any partner 5 years or older, wealth, intervention assignment, orphan status, prior pregnancy at baseline
