**National Institute for
Health Research**

Identifying priorities for Intensive/Critical Care research

Have you and your colleagues been unsure about the best treatment option for a patient? Are there evidence gaps or uncertainties in your specialty? Are you a patient/relative of someone who has been in intensive care? Are you a decision maker involved in delivering a service? Do you have an important question that might be answered by research?

The [National Institute for Health Research](#), in partnership with key stakeholders, wants your help to identify and update the priorities for future research in Intensive/Critical Care medicine. We would particularly like to hear about topics that fit within the remit of three of the [programmes hosted by NETSCC](#) (HTA, EME and HS&DR); other suggestions received will also be shared with the community so please do not let this put you off submitting your idea if you are unsure about the programme remit.

It would be helpful if you could include as much information as possible, but we will consider all suggestions sent to us, no matter how developed! **We have included space for you to provide up to three different uncertainties** but if you have more you are welcome to submit the survey again.

If you would prefer to contact us directly, please email netsid@nhr.ac.uk. The survey will close on **Wednesday 20th December**, so please submit your responses by this date. Thank you.

1.1 What is the most important unanswered clinical or service delivery question in critical care you think needs to be answered?

1.2 To best answer this question what would you propose for the:

- Patient population,
- the Intervention/service to test/evaluate,
- the Comparator/control, and
- the important Outcomes to measure?

1.3 Why is this important to patients and the NHS? Please provide information to help us understand the issue.

Appendix A: Survey Tool

2.1 What is the second most important unanswered clinical or service delivery question in critical care you think needs to be answered?

2.2 To best answer this question what would you propose for the:

- Patient population,
- the Intervention/service to test/evaluate,
- the Comparator/control, and
- the important Outcomes to measure?

2.3 Why is this important to patients and the NHS? Please provide information to help us understand the issue.

3.1 What is the third most important unanswered clinical or service delivery question in critical care you think needs to be answered?

3.2 To best answer this question what would you propose for the:

- Patient population,
- the Intervention/service to test/evaluate,
- the Comparator/control, and
- the important Outcomes to measure?

3.3 Why is this important to patients and the NHS? Please provide information to help us understand the issue.

4 Is there anything else you'd like to tell us?

About You

What is/are your area(s) of expertise?

If you are happy to be contacted about your submission, please provide your details below.

Name	<input data-bbox="534 748 1153 790" type="text"/>
Job title	<input data-bbox="534 799 1153 842" type="text"/>
Organisation	<input data-bbox="534 851 1153 893" type="text"/>
Email address	<input data-bbox="534 902 1153 945" type="text"/>

Thank you for completing this survey. The suggestions we receive will be collated for prioritisation. Depending on the number of research suggestions we receive we may send out a subsequent survey to guide this process. If you have provided contact details, these will be stored securely and used only to contact you for further information about your suggestions. If you require any further information or would like to contact us directly, please email netsid@nhr.ac.uk.
