

Supplement 2. A comparison of socio-demographic characteristics, satisfaction from HBR and level of independence between participants who participated in the second questionnaire (6-month follow-up) and participants who dropped out

		Did not participate in 2nd round N= 50	Participated in 2nd round N= 96	P
Age	Mean (SD)	64.32 (18.47)	65.89 (13.47)	0.59
		N (%)	N (%)	
Gender	Men	16 (32.0%)	36 (37.5%)	0.51
	Women	34 (68.0%)	60 (62.5%)	
	Married	33 (68.8%)	60 (63.8%)	0.02
Family status	Single	6 (12.5%)	3 (3.2%)	
	Widow	9 (18.8%)	22 (23.4%)	
	Divorce	0 (0%)	9 (9.6%)	
	Life partner	33 (66.0%)	63 (66.3%)	0.03
Living situation	Alone	1 (2.0%)	13 (13.7%)	
	Grown children/ other family members	11 (22.0%)	9 (9.5%)	
	Caregiver/facility	5 (10%)	10 (10.5%)	0.80
Type of surgery	Knee replacement	11 (22.0%)	28 (29.2%)	
	Fracture	20 (40.0%)	31 (32.3%)	
	Hip replacement	12 (24.0%)	21 (21.9%)	
	Fixation	2 (4.0%)	5 (5.2%)	

		Did not participate in 2nd round N= 50	Participated in 2nd round N= 96	P
	Spine	1 (2.0%)	5 (5.2%)	
	Other	4 (8.0%)	6 (6.3%)	
Private health insurance ownership	No	40 (80%)	81 (84.4%)	0.50
	Yes	10 (20%)	15 (15.6%)	
Hospitalization days	Mean (SD)	6.92 (3.82)	6.42 (4.60)	0.50
Number of days from discharge until HBR	Mean (SD)	4.48 (3.74)	4.63 (5.10)	0.85
Overall satisfaction at the end of HBR	Not satisfied	4 (8.0%)	14 (14.7%)	0.21
	Partially satisfied	5 (10.0%)	16 (16.8%)	
	Very satisfied	41 (82.0%)	65 (68.4%)	
Level of independence	Mean (SD)	2.60 (0.75)	2.88 (0.80)	0.04
