

SUPPLEMENTAL DATA

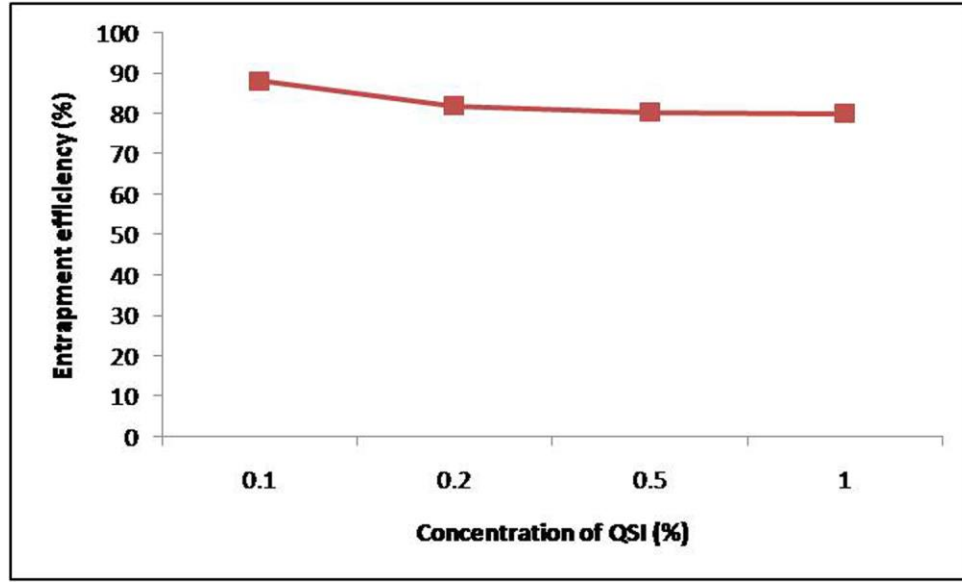

Figure S1. Entrapment efficiency of QSINPs with different concentration of QSI.

Figure S2. Qualitative screening images indicating QSI activity of NP formulation kept at different temperature conditions (a) after 2 months (b) after 4 months (c) after 8 months using *E. coli* MG4 reporter strain.

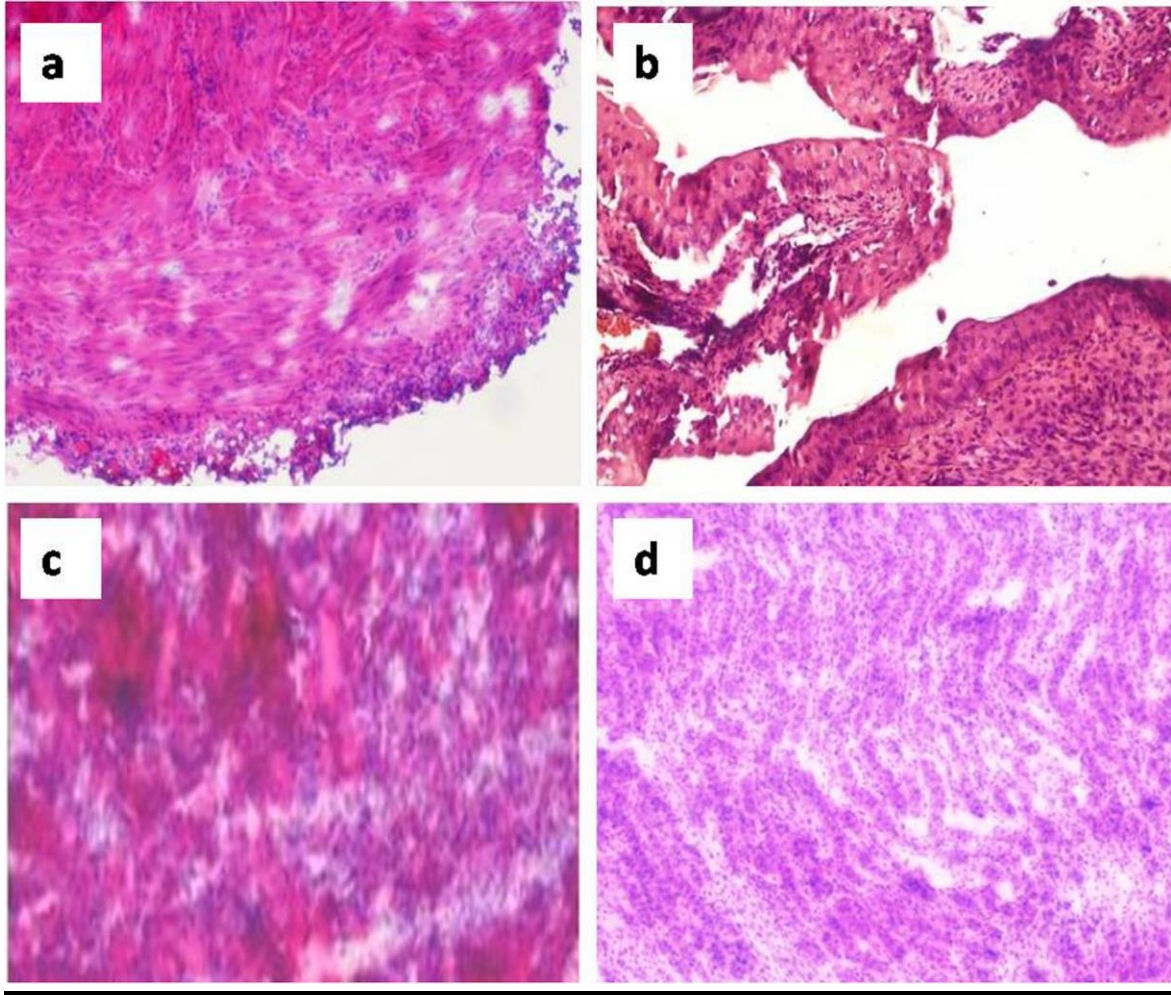

Figure S3. Photomicrographs (H & E) of bladder tissue of mice (a) on 5th day at 100X and (b) on 10th day at 400X (c) of renal tissue on 5th day at 100X and(d) on 10th day at 100X after administration with FITC tagged QSINPs for four days.
