

Supplementary material Figure and table legends

Figure S1

Calibration curves for *Mariprofundus* sp. specific probe, MAR665 showing signal intensity and hybridization percentage obtained using hybridization buffers with formamide concentrations between 10-70%. The calibration was done using a monolabeled probe (Atto488)

Figure S2

Chemical characteristics of the water entering the reactors (inlet) and exiting the reactors at the top, middle, and bottom sites in the Äspö HRL as measured in October 2010 and March 2011.

Figure S3

A bacteria covered particle from dark aerated reactor (R3) at the top site as analyzed with DAPI for total bacterial counts (A) and with Fluorescence *In-Situ* Hybridization using the newly designed Mar665, *Mariprofundus* specific probe (B). Such particles were common in this reactor.

Figure S4

Fluorescence *In-Situ* Hybridization results from the dark aerated and non-aerated (R3 and R4, respectively) reactors at sites top and middle sites as obtained using the general Bacterial probe mix (EubI-III), and probes specific to Alpha-, Beta- and Gamma- classes of the Proteobacteria (Alf968, Bet42a and Gam42a, respectively). The percents are calculated out of total DAPI counts. The numbers above the bars represent the FISH value (black) and the sequence frequency of the respective class (red).

Table S1

Results of the multivariate models (individual factors – first column per parameter, and covariance – second column per parameter) detailed for the various taxa analyzed. The results of the covariance model are given in red.

Table S2

A subset of the results of the multivariate models showing only taxa responding to iron (total of Fe²⁺). The first column per parameter shows the results from the individual factors model. The covariance model is shown in the second column of the parameter. The results of the covariance model are given in red. Taxa predicted to be involved in iron oxidation and iron reduction are marked in yellow and green, respectively.

Table S3

Abundance of *Mariprofundus* in R3 and R4 at sites TASA top and NASA middle as detected by Fluorescence *In-Situ* Hybridization using the newly designed Mar665 probe. The abundance of *Mariprofundus* On particles in reactor R3 at TASA top was 10±3%.

Table S4

Phylogenetic assignment legend for figure 5.

Table S5

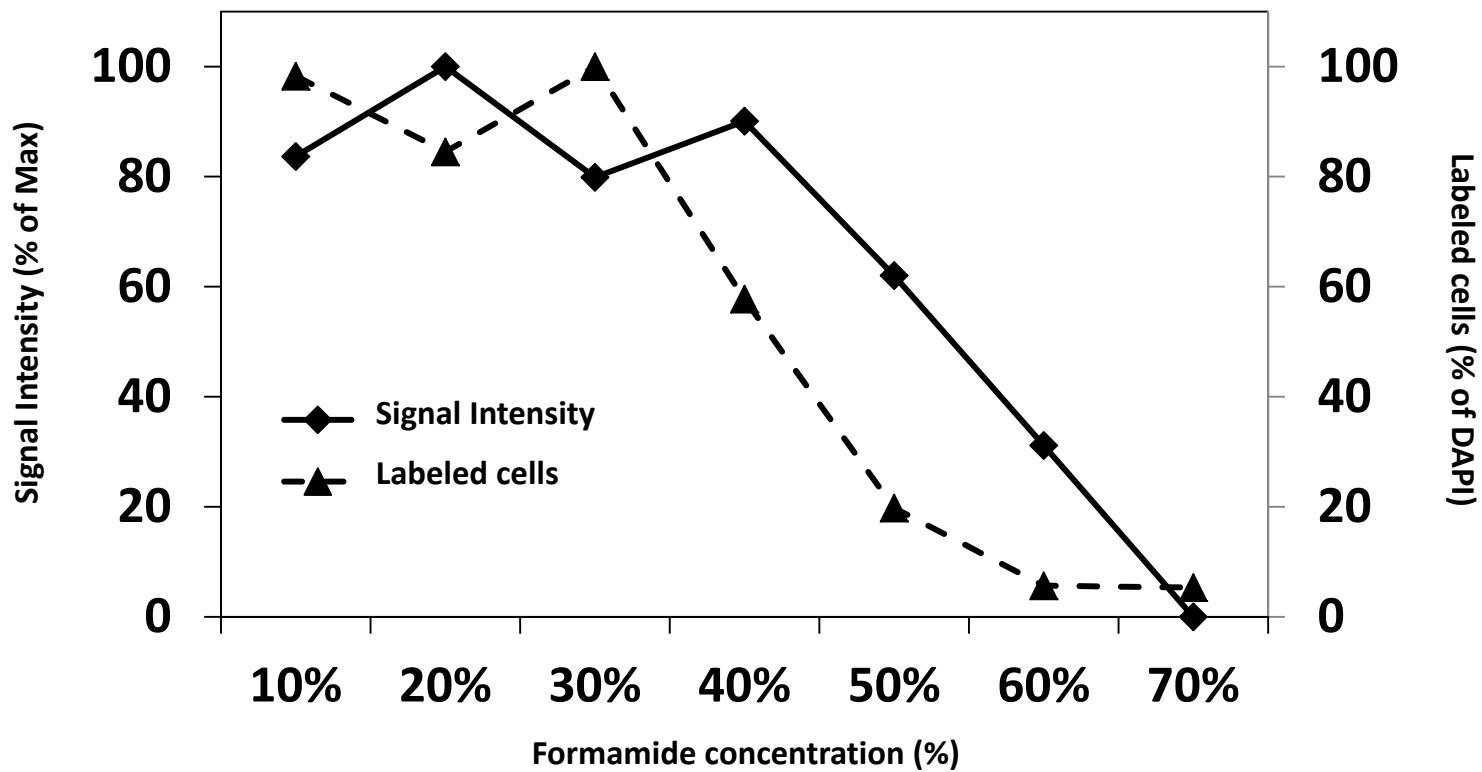

Maximal sequence frequency observed per taxonomic path in subsamples (n=2-3) taken from the different Top, Middle and Bottom flow reactors.

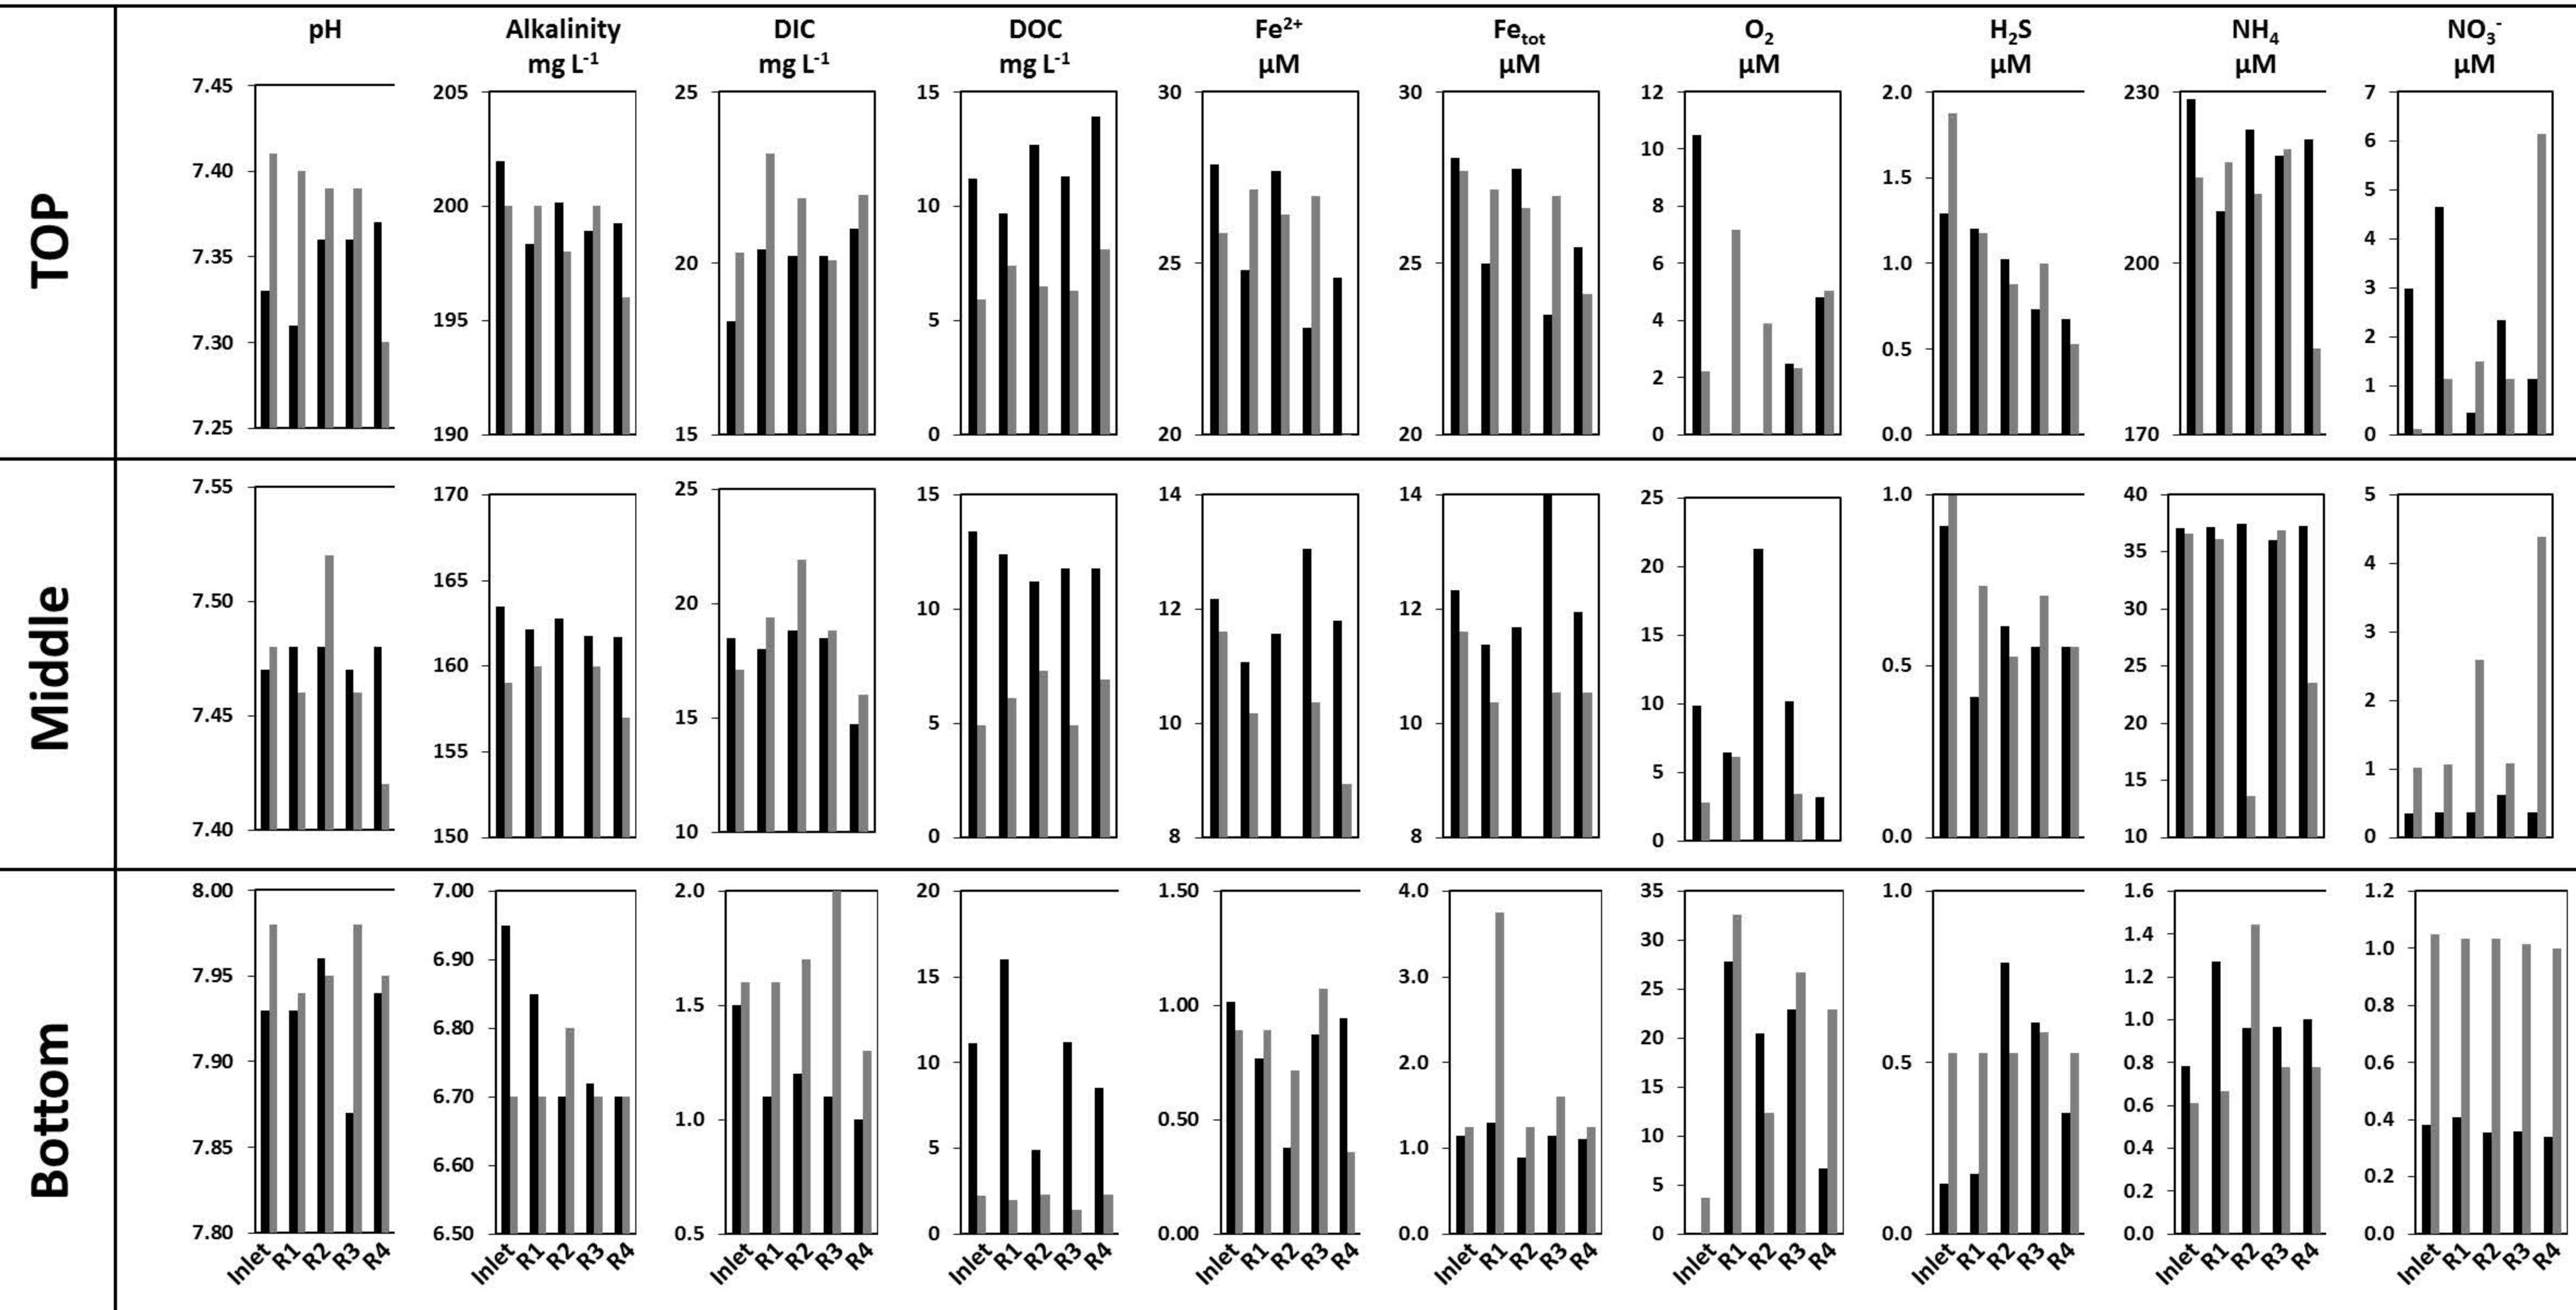

Table S6

Maximum number of Operational Taxonomic Units (98% similarity) observed per taxonomic path in subsamples (n=2-3) taken from the different Top, Middle and Bottom flow reactors.

Figure S1

Calibration curve for probe MAR665 (*Mariprofundus* sp.)
