

Supplementary information:

A surfactant-stripped cabazitaxel micelle formulation optimized with accelerated storage stability

Boyang Sun, Jing Huang, Moustafa T. Mabrouk, Yumiao Zhang, Honglin Jin, Jonathan F. Lovell

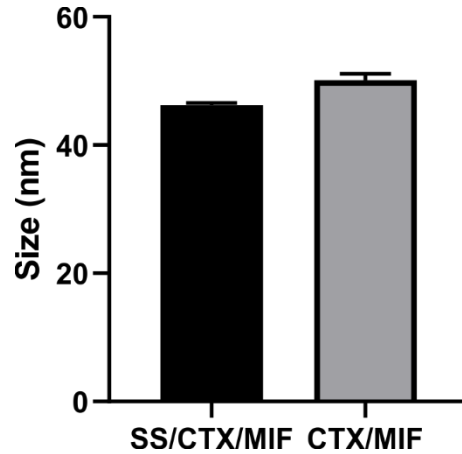

Figure S1. Micelle size, determined by hydrodynamic light scattering, before and after surfactant-stripping. Values show mean \pm std. dev. for $n=3$ preparations. The sample PDI was a mean of 0.11 for both samples.

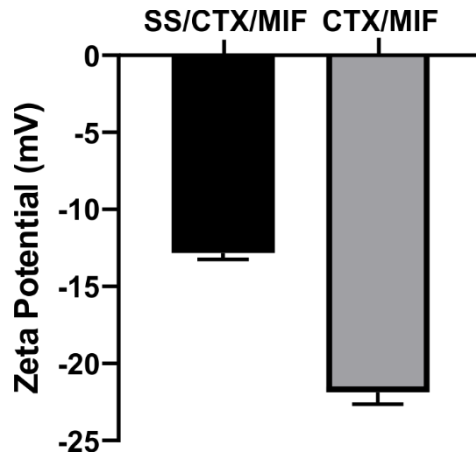

Figure S2. Micelle zeta potential before and after surfactant-stripping. Values show mean \pm std. dev. for $n=3$ preparations.
