Disposable Laparoscopic Specimen Bags

Self-opening, high-strength bags with introducer ensure safe specimen capture with easy, one-handed operation. Sterile, single use specimen containers are designed for use in retrieving specimens during endoscopic surgery. Supplied in a dispensing tube for ease of insertion through a 5, 10, or 12mm trocar cannula.

Unique Design

Patented design provides comfortable ergonomics and can be deployed and manipulated with one hand. Large bags resist tearing, reducing the potential for cell migration.

Easy to Use

Indicators on the introducer indicate the opening (top) of the bag for correct placement. Bags can be detached within abdominal cavity for later retrieval.

- Minimal insertion force enables smooth deployment
- Insert indicator ensures bag will be in proper position when deployed
- String with slip knot facilitates closure of the specimen bag
- Self-opening bag design provides easy and safe specimen capture
- High strength polyurethane bag material assures no leakage

Detachable Laparoscopic Specimen Bags

Detachable disposable specimen bags are supplied with an introducer and bag for ease of insertion through a 5, 10, or 12mm trocar cannula.

Independent Memory Wire Bags

Disposable specimen bags with memory wire in a dispensing tube for ease of insertion through a standard 10, 11, or 12mm cannula.

Disposable Insufflation (Veress Type) Needles

Used to establish pneumoperitoneum prior to abdominal surgery.

- Retractable safety, spring loaded tip protector. It retracts as the needle is pushed through the abdominal tissue and automatically advances forward once the peritoneum is penetrated.
- Visual needle position indicator
- Clear, comfort handle for easy hang drop test, and a luer lock connector for insufflating the abdominal cavity

Puncture Closure Devices (Trocars Wound Closure)

Allows full closure of peritoneum and fascial layers through the trocar. Exchangeable through trocar cannula for easy port closure while maintaining pneumoperitoneum. The “J” shaped suture placement needle minimizes risk of organ and tissue injuries. Accommodates both braided and monofilament absorbable sutures, up to size 1.

Kittner Blunt Dissectors

Convenient, cost-effective packaging houses these sponge and blunt tip probes. Unique dual tip saves time and reduces costs. Non-absorbant radiopaque tip. 40cm length.

Anti-Fog Kit

Water-based solution reduces fogging of scopes. Includes adhesive backed sponge with radiopaque ribbon.

525 French Road, Utica, NY 13502

Ordering Information

Description	Qty Per Box		Catalog Number
Anti-Fog Kit			
6cc anti-fog solution vial, sponge single-use, sterile	10/case	1/pkg	CD004
Kittner Blunt Dissectors			
Single tip Kittner, 5mm x 40cm, single use, sterile	5/case	1/pkg	CD801
Dual tip Kittner, 5mm x 40cm, single-use, sterile	5/case	1/pkg	CD802
Luer Port Cap			
Universal Luer Port Cap, non-sterile	5/case	1/pkg	CD203
Puncture Closure Device (Trocár Wound Closure)			
10mm, single-use, sterile, Cannula 10-12mm	10/case	1/pkg	PCD-10
Veress Needle			
Pneumoperitoneum Insufflation Needle 14 gauge, 12cm, with stainless steel tip guard and band indicator	10/case	1/pkg	60-6050-001
Pneumoperitoneum Insufflation Needle 14 gauge, 15cm, with stainless steel tip guard and band indicator	10/case	1/pkg	60-6050-002
