## Test Credit Cards in the Paycorp Preproduction Environment

The Paycorp Preproduction environment utilises specific Test Credit Cards to return specific results. There are two groups of test cards. ‘Approve All’ cards and “Test” Cards.

### Test Cards

The Approve all cards are used where you need to get an approved response for every transaction.

Scheme	Card Number	Region
Visa	4001001001001006	Domestic
MasterCard	5100100100100102	International
American Express	340010010010013	Domestic
Diners Club	30010010010018	International

### Approve All

In addition to these are the “Test Cards”. These can be used to simulate a variety of bank responses. When using these cards, the Cents value of the transaction determines the responsecode returned. Eg A transaction of \$10.51 will return 51 INSUFFICIENT FUNDS. An amount of \$5.05 will return 05 CONTACT BANK. The dollar value does not matter, only the cents value.

Scheme	Card Number	Region
Visa	4564456445644564	International
MasterCard	5430489999999992	Domestic
American Express	376000000000006	International
Diners Club	36123456789013	Domestic

If you are using and or testing Paycorp Tokens, then the tokens of these cards will return the same results as the original card number.

Other Cards may not be used in the Paycorp Test environment. All other cards will Fail with VA INVALID CARD.
