

CANVAS PRINTS

Thanks to ultra-modern UV Art Print systems, our canvas prints will always meet the very latest standards. The matte surface, so characteristic of this material, has a natural, idyllic, and warming appearance. Colour photos will dazzle for decades.

Should you so wish, your print can be mounted on a sturdy stretcher frame (see the Gallery Wrapped Canvas display option) to give your print long-lasting stability.

The premium canvas from Berger (360g/m²) is made from 100% cotton and its woven texture is clearly visible in the matte surface. This creates a tactile, vibrant effect, in particular for images that lack distinct image components and contours.

Immediately after the print, the colour pigments are hardened, then encapsulated in resin, using UV light. This means your canvas print is resistant to external influences such as UV exposure and light splashes of water.

Even the old masters understood the advantages of this foundation.

No additional mounting is necessary. The natural material is popular amongst professional photographers, particularly those who want their landscapes to make a stronger impression.

All photographs are signed. Printing and production is by an industry-leading photo lab company with worldwide production facilities. Canvas print photographs are securely protected in high quality, robust packaging for shipping.
