

- ~ Lightweight and robust
- ~ 1 mm thick aluminium
- ~ Silver from the back
- ~ Special transparent coating

HD METAL PRINTS

For a minimalist, contemporary look, metal printing involves cutting edge technology and is a modern way to reproduce an image. The production involves a process called dye sublimation, which allows for the rendering of exact details and brilliant colours with excellent durability.

This display creates the illusion of floating from the wall. Photos created in this style are sure to give you years of enjoyment in your home or office. They are also a perfect display for any public areas.

Exceptional colours - highly recommended for colourful and high-contrast images.

Reliable and durable - thermal sublimation and robust aluminium make a great combination.

The aluminium is 1 mm thick and has a special, transparent coating, making it a straightforward and durable substrate for your photo. HD Metal Prints are easy to handle in any size or format, and they are weatherproof and impervious to fluctuations in temperature.

Please note:

Although the HD Metal Print is impressively perfect, the printing process can result in minor surface imperfections or irregularities.

All photographs are signed. Printing and production is by an industry-leading photo lab company with worldwide production facilities. Metal prints are securely protected in high quality, robust packaging for shipping.
