

Demonstration 6.4 Stereoscopic Pictures

Print out the simple jpg image below and place a piece of cardboard on the dotted line perpendicular to the paper. Rest your nose on the cardboard (yes, you are going to look a little ridiculous). Focus each eye on the figure on the appropriate side of the cardboard. Try to fuse these two images into one single image. You may find it helpful to try converging your eyes by looking slightly cross-eyed. When you achieve a single image, it should look three-dimensional. Once you have achieved that, you might want to try the other stereoscopic image. Feel free to take a look [here](#) and try other stereoscopic images.
