

Chapter 1 Introduction: the scope of medical anthropology

CLINICAL QUESTIONNAIRE

- 1 Are the patient's *health beliefs and behaviours* primarily the result of:
 - a *individual* factors? *individual* factors (age, gender, size, appearance, personality, intelligence, experience, physical state, emotional state)?
 - b *educational* factors (ethnic or professional subculture)?
 - c *socio-economic* factors (poverty, social class, economic status, occupation, unemployment, discrimination, networks of social support)?
 - d *environmental* factors (weather, population density, habitat, available housing, roads, bridges, public transport and health facilities)?
