This document is a compilation of sources that are broadly related to Project Management in some capacity (in some cases more directly than others). At the present time, it is not categorised, but over time I intend to categorise and annotate the bibliography to make it more useful to end users. In the meantime, if you discover any useful books, journal articles, chapters, etc. that are not already included in this list, please feel free to email me with suggestions (c.m.walker@leeds.ac.uk).
