Freshwater Fish Tanks Are Easier To Take Care Of

Fish have been a hobby for years. The first people to keep fish in captivity were the Chinese. They chose the common goldfish, a freshwater fish. Now people keep a larger variety of fish to keep in your tank, much larger than the Chinese fish bowls. The choice is which fish you want. There are the colorful saltwater and, the easy-to-take-care-of freshwater.

I think freshwater are better because they are the easiest to take care of. One disadvantage is they are less colorful but, I think easier to take care of tops the fact that they are less colorful.

The disadvantages of salt water is that they are harder to take care of and they take up more space. You also have to buy salt which can cost up to \$100 a bag. You also change the water every week.

I think overall freshwater fish are easier and less costly to take care of.
