

JOURNEY OF THE UNIVERSE (Ref. 243)

The story of our 14 billion-year-old universe is the story of ourselves. This mind-expanding 2011 documentary draws from modern science and ancient wisdom to ask once more the eternal question, why are we on this planet?

Enthusiastic host Brian Thomas Swimme, an evolutionary philosopher, takes us back to Pythagoras and ahead to new findings in geology, biology and astronomy to rethink our relation to the cosmos.
