

COMMUNITY HEATING TAIN

WHEN

Wednesday 13th May, 2015
6:30pm - 7:30pm

WHERE

Duthac Centre
Shandwick Street, Tain IV19 1BQ

The Highland Council is leading research on sustainable heating options for the Tain Community as part of a Scottish Government funded study. The first option considered uses local renewable energy to provide district heating while the other option explores the opportunity to extend the natural gas network. If the new heating options are progressed, homes in Tain could get the opportunity to benefit from more affordable heating for their home.

The study group wishes to take some time to outline both options and gather your opinions on the proposed systems.

The Engineering Consultancy, Mabbett, will deliver a short presentation on the feasibility study and Council representatives, along with those involved in the research, will be available to gather your opinions, provide any particular information and answer any questions.

PUBLIC INFORMATION MEETING

AT THE MEETING

Mabbett
Highland Council
Tain Community

ITEMS FOR DISCUSSION

District Heating
- What it is
- How it works
Natural Gas
Community Benefits
Fuel Poverty
Costs
