Summary of LTAD Framework for Swimming 5

ACKNOWLEDGEMENTS

This document is adapted from the Shorter Guide to Long Term Athlete Development (LTAD), produced by the same author on behalf of the ASA. Acknowledgement is also given to Sport England, who originally funded the LTAD project in swimming and British Swimming, who endorsed The Swimmer Pathway: Long Term Athlete Development (available from ASA Merchandise).

INTRODUCTION

Scientific research has identified that it takes at least 10 years, or 10,000 hours for talented athletes to achieve sporting excellence. There are no short cuts!

There are two ways in which young swimmers can improve their performance:

• Training;
• Growth and development.

Long Term Athlete Development (LTAD) is about achieving optimal training, competition and recovery throughout an athlete’s career, particularly in relation to the important growth and development years of young people. If a long term approach to training is not adopted there is likely to be a plateau in performance, when growth and development slows significantly. For some swimmers their performances may get worse! At this point the short-term training approach cannot be reversed. This often leads to drop out before a swimmer has achieved close to their potential.

LTAD is a swimmer retention model rather than an elite athlete model. One of the core aims of LTAD is to ensure that the desire and talent of a swimmer is matched to an appropriate training environment. If this can be achieved across Scotland, then the likelihood of swimmers staying in the sport and achieving personal success will be increased significantly.
REASONS FOR LTAD

There are five clear reasons for introducing a Long term athlete development approach:

• To establish a clear swimmer development pathway;
• To identify gaps in the current swimmer development pathway;
• To realign and integrate the programmes for developing swimmers and swimming in Scotland;
• To provide a planning tool, based on scientific research, for coaches and administrators.
• To guide planning for optimal performance.

It is anticipated that the principles of LTAD will be used to review existing swimming programmes led by the governing body and inform any future initiatives. It is hoped that all swimming providers will use LTAD in a similar way. This will enable the swimming community in Scotland to pull in the same direction.

CURRENT SPORT SYSTEM ISSUES

The following are some general observations of sporting systems from around the world (including Scotland):

• Young athletes under-train, over-compete;
• Low training to competition ratios in early years;
• Adult competition superimposed on young athletes;
• Adult training programmes superimposed on young athletes;
• Male programmes superimposed on females;
• Training in early years focuses on outcomes (winning) rather than processes (optimal training);
• Chronological age influences coaching rather than biological age;
• The “critical” periods of accelerated adaptation are not fully utilised;
• Poor training between 6-16 years of age cannot be fully corrected (athletes will never reach genetic potential);
• The best coaches are encouraged to work at elite level;
• Coach education tends to skim the growth, development and maturation of young people;
• Coaches, Swimmers and Parents need to be educated in LTAD principles;
• Administrators and officials need to be educated in LTAD principles.

Bill Sweetenham (British Swimming National Performance Director) summed up the current position:

“Right now we have too many clubs in Great Britain offering too little training time and in most cases too much competition. This leaves many athletes in a twilight zone of training less than 14 hours a week, hoping for international results and expecting overseas tours and camps and national level success. For an athlete training 8 hours a week the benefits are social, fun, participation, team building and health benefits. For those athletes wishing for an international career and who are serious about optimum performance at the national level then swimming in a programme with a high performance objective of 18-25 hours is approximately what it will take to achieve these objectives. However, in most countries and in most clubs, the vast majority of athletes train between 8 and 14 hours per week. This is the twilight zone, too much volume to be fun and achieve the social and happy benefits of the participation level (8
hours and under) and not enough to achieve the competitive results or optimum performance that an athlete expects. In other words it is too much for participation and too little to be considered really serious in terms of the competitive nature of the sport. Changing this twilight zone should be the major focus of every club and national programme.”

(Bill Sweetenham, Wavelength 2002)

LTAD FRAMEWORK

Long Term Athlete Development (LTAD) is a sports development framework that is based on human growth and development. In short, it is about adopting an athlete centred approach to swimming development.

All young people follow the same pattern of growth from infancy through adolescence, but there are significant individual differences in both the timing and magnitude of the changes that take place. It is however, important to stress that human growth and development happens without training, however swimming training can enhance all of the changes that take place.

A number of scientists have reported that there are critical periods in the life of a young person in which the effects of training can be maximised. This has led to the notion that young people should be exposed to specific types of training during periods of rapid growth and that the types of training should change with the patterns of growth. These have been used by Dr Istvan Balyi to devise a five stage LTAD framework that has been be adapted to swimming:

- FUNdamentals Basic movement literacy (generic)
- SwimSkills Building technique (sports specific)
- Training to Train Building the engine (sports specific)
- Training to Compete Optimising the engine (sports specific)
- Training to Win Maximising the engine (sports specific)

Stage 1 – FUNdamental

AGE: Female 5 to 8 years; Male 6 to 9 years.

The FUNdamental stage should be structured and fun! The emphasis is on developing basic movement literacy and fundamental movement skills across a range of activities. The skills to be developed are the ABCs (Agility, Balance, Coordination, Speed), RJT (Running, Jumping, Throwing), KGBs (Kinesthetics, Gliding, Buoyancy, Striking with the body) and CPKs (Catching, Passing, Kicking, Striking with an implement). In order to develop basic movement literacy successfully participation should be encouraged across as many different activities as possible.

Speed, power and endurance should be developed using FUN and games. In addition, children should be introduced to the simple rules and ethics of sports. No Periodisation should take place, but there should be well-structured programmes with proper progressions that are monitored regularly.
**Stage 2 – SwimSkills: Building technique!**

**AGE:** Female: 8 to 11 years;  
Male: 9 to 12 years.

During this stage young people should develop the skills of specific sports and learn how to train in a structured environment. There should be participation in complementary sports i.e. those sports, which use similar energy systems and movement patterns. They should also learn the basic technical/tactical skills, and ancillary capacities, including:

- Warm up and cool down;
- Stretching;
- Hydration and nutrition;
- Recovery;
- Relaxation and focusing.

This stage coincides with a period of peak motor co-ordination, where the central nervous system is reaching maturity, therefore there should be an emphasis on the development of sports specific skills. Training should also include the use of 'own body weight' exercises; medicine ball and Swiss ball exercises as well as developing suppleness.

Although the focus is on training, competition should be used to test and refine skills. It is recommended that on average, for every 3 hours of training there should be no more that 1 hour of competition. Therefore, a 2 hour gala taking place at the end of a week should result in the swimmer training for at least 6 hours for that week, even though the swimmer will only be competing for a fraction of that 2 hour gala. There should be single periodisation i.e. there is only one peak in the training year.

If a young swimmer misses this stage of development then they are highly unlikely to achieve their full potential in swimming. One of the main reasons athletes plateau during the later stages of their careers is because of an over emphasis on competition instead of optimising training during this very important stage.

**Stage 3 – Training To Train: Building the engine!**

**AGE:** Female: 11 to 14 years;  
Male: 12 to 15 years.

During the Training to Train stage, there should be an emphasis on maintaining high skill levels whilst developing aerobic (endurance) capacity. This is the stage where there is greater individualisation of fitness and technical training. The focus should still be on training rather than competition and this training should be predominantly about maintaining high skills levels whilst undertaking high volume, low intensity workloads. It is important to emphasise that high volume, low intensity training cannot be achieved in a limited time period, and therefore the time commitment to training should increase significantly. As the volume of training increases there is likely to be a reduction in the number of competitions undertaken. However, competitions should still be used to test and refine skills across a broad range of events i.e. no specialisation. Specific targets should be set for each competition undertaken with a view to learning basic tactics and mental preparation. There should be either single or double periodisation of the training year i.e. there is one or two peaks in the training year.

During this stage, training should continue to develop suppleness and to include the use of 'own body weight' exercises; medicine ball and Swiss ball exercises. However towards
the end of this stage, preparations should be made for the development of strength, which for girls occurs at the end of this stage and for boys at the beginning of the next stage. This should include learning correct weight lifting techniques (without any resistance), which could begin towards the end of the SwimSkills stage. The ancillary capacities (the knowledge base of how to warm up and warm down; how to stretch and when to stretch; how to optimise nutrition and hydration; mental preparation; regeneration; how and when to taper and peak; pre-competition, competition and post competition routines) should be established.

Similar to the previous stage, if insufficient time is devoted to this stage or it is missed, then the young swimmer is highly unlikely to reach their full potential in swimming.

**Stage 4 – Training To Compete: Optimising the engine!**

**AGE:** Female: 14 to 16 years;  
Male: 15 to 18 years.

During the Training to Compete stage there should be a continued emphasis on maintaining high skill levels whilst focusing on maintaining high volume workloads but with increasing intensity. The number of competitions should be similar to the end of the previous stage but the emphasis should be on developing individual strengths and weaknesses through modelling and nurturing technical and tactical skills based around specific strokes or distances, but not both. As a result, there should be either double or triple periodisation of the training year. In addition, the ancillary capacities should be refined so they are more specific to the individual’s needs.

During this stage, training should also focus on developing maximum strength gain through the use of weights. This should be coupled with continued work on core body strength and maintaining suppleness.

**Stage 5 – Training To Win: Maximising the engine!**

**AGE:** Female: 16+ years;  
Male: 18+ years.

This is the final stage of athletic preparation. The emphasis should be on specialisation and performance enhancement. All of the athletes’ physical, technical, tactical, mental, and ancillary capacities should now be fully established with the focus shifting to the optimisation of performance. Athletes should be trained to peak for specific competitions and major events. Therefore, all aspects of training should be individualised for specific events. There should be either double, triple or multiple periodisation, depending on the events being trained for. During this stage, training should continue to develop strength, develop core body strength and maintain suppleness.

**SUMMARY OF LTAD FRAMEWORK FOR SWIMMING**

The following table contains a summary of the LTAD framework for swimming. It is the intention of Scottish Swimming to establish and implement the following swimming development programmes to deliver the guidelines contained in the LTAD framework:

- A local authority / club development programme and quality mark;
- Teacher / coach certification and licensing scheme.
### SUMMARY OF LTAD FRAMEWORK FOR SWIMMING

### Growth and Development Considerations

<table>
<thead>
<tr>
<th>Swimming Specific Skills</th>
<th>Development of all 4 strokes</th>
<th>Improvement of all 4 strokes</th>
<th>Development of aerobic base, plus all 4 strokes (200m IM).</th>
<th>Start to compete in a wider range of events based on strokes or distance, but not both.</th>
<th>Specialise in an event(s).</th>
</tr>
</thead>
</table>

### Periodisation

<table>
<thead>
<tr>
<th>Periodisation</th>
<th>No periodisation, but well structured programmes with proper progression.</th>
<th>Single Periodisation (1 x 48 weeks)</th>
<th>Single or Double Periodisation. Double (2 x 24 week macro-cycles)</th>
<th>Double or Triple Periodisation. Double (2 x 24 week macro-cycles)</th>
<th>Double, Triple or Multiple Periodisation. Double (distance) Triple (middle distance) Multiple (sprinters)</th>
</tr>
</thead>
</table>

### Session Numbers

<table>
<thead>
<tr>
<th>Session Numbers</th>
<th>General sport participation 5-6 times per week. This should include land work and multi sport activity.</th>
<th>Sport specific training 4-6 times per week, plus participation in other sports.</th>
<th>Sport specific training 6-12 times per week including land work.</th>
<th>Sport specific technical, tactical and fitness training 8-12 times per week, including land work.</th>
<th>Sport specific technical, tactical and fitness training 10-15 times per week, including land work.</th>
</tr>
</thead>
</table>

### Session Length

<table>
<thead>
<tr>
<th>Session Length</th>
<th>30-45 minutes</th>
<th>60-90 minutes</th>
<th>2 hours</th>
<th>2 hours</th>
<th>2+ hours</th>
</tr>
</thead>
</table>

### Training Hours

<table>
<thead>
<tr>
<th>Training Hours</th>
<th>Sessional. 4-7 hours per week in water; 1-2 hours per week land work.</th>
<th>12-24 hours per week in water; 2-3 hours per week land work.</th>
<th>16-24 hours per week in water; 3-4 hours per week land work.</th>
<th>20-24 hours per week in water; 3-6 hours per week land work.</th>
<th>Depends on specialisms, but breakpoint volume maintained. Distance swimmers cover more.</th>
</tr>
</thead>
</table>

### Training Volume

<table>
<thead>
<tr>
<th>Training Volume</th>
<th>8,000m – 16,000m/week</th>
<th>At beginning of Training to Train: 24,000m – 32,000m/week. Working towards breakpoint volumes (2,100–2,500+ km/year or 44km–52+ km/week over 48 weeks) at maturation (13/14/15 years).</th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
</table>

**Shorter Guide to LTAD**
### Number of Competitions

- 75% training to 25% competition ratio

### Competition Profiles

- Sequence of 3 competitions below current level, 2 competitions at current level, 1 competition above current level.

### Competition Targets

- Full Training: Heat - 3% of PB/Goal time, Semi Final - 2% of PB/Goal time, Final - 1% of PB/Goal time
- Tapered: Heat – 2% of PB, Semi Final – 1% of PB, Final - 1% of PB

### Competition Events

- BAGcat events at lower end of Training to Train moving towards: 100/200m BF, BK, BR; 200/400m IM; 100/200/400/800/1500m FS; 4 x 100m FS & Medley relays.

### Competition Types

- Club Championships
- Inter club galas
- Local mini leagues
- Local Open meets

### Local Authority & Club quality mark

- Teaching
- SwimSkills

### Teacher / Coach Education

- Level 2 Teacher
- Level 1 Coach
- Level 2 Coach
- Level 2 Teacher
- Level 3 Coach
- Level 4 Coach
- Level 5 Coach

### SASA / British Swimming Programmes

- SASA Teaching Plan
- SASA Awards
- Active Schools
- SASA District Camps
- Area Institutes of Sport
- World Class Start – IM
- World Class Start – Age group
- SASA District Camps
- Area Institutes of Sport
- World Class Potential – Age group
- World Class Potential – Youth

- Scottish Institute of Sport
- World Class Performance (Top 25 in the world)
