

Please see below SEPA's update.

Calachem: No complaints received since our last update. We are continuing to work with the company towards earliest implementation of a long-term solution to reduce odour emissions.

Petroineos: Petroineos had a short-term issue with the Vapour Recovery Unit at the road loading terminal over two days. This led to additional VOC emissions over this period. A repair has now been completed. An issue on the Hydrogen Unit led to excessive noise on the 13 September while the unit was shut down, leading to five noise complaints. The cause of this incident is being followed up by SEPA.

Ineos Chemicals: The site re-started one of its manufacturing plants on 7th September. We received two complaints about flaring.

Ineos FPS: Nothing new to update.

Ineos Infrastructure: Nothing new to update.

Kind regards

Linzi
