

BEESTON WILDLIFE GROUP

Plants with umbellifer flowers

Here are three to get you started.

Cow Parsley: white frothy flowers, often in swathes, smooth stems, leaves fern-like but dull.

Hogweed: creamy dull white flowers on upturned umbrella like stems, leaves deeply lobed, stems firm and hairy and rubbed. Plants are individually spaced - not in big swathes.

Hemlock: White flowers spaced out on weak upturned umbrella, stems smooth green with maroon spots, leaves fern-like but deep green with a shiny appearance.

Hemlock (left) with Hogweed (right).

Don't be tempted to taste any - they can be fatal! Easy to identify when you know what to look for. Why not a have a go at identifying them yourself?
