

Here at Kim's Kitchen we aim to use local produce at all times reducing our carbon footprint. We have the advantage of having more than an adequate supply of venison due to the deer numbers on island. The deer are completely wild and have a natural diet consisting of heather, herbs, seaweed & grasses. In line with Scottish tradition, the deer are humanely stalked and shot in the wild. They are transported back to the village using our Rum Ponies. The venison is also processed on island!
