

# SLR BETTER SAFETY PROGRAMME

 “A behavioural-based safety plus programme.”

This programme is for leaders from any industry who are looking to improve safety performance through a focus on the people within their organisations.

Scalable to the size of the site/business and organisation; it is applicable to companies starting to consider behavioural safety or those who have already invested in safety improvement programmes and need to validate their priorities.

## SAFETY PROGRAMME

### What clients get:

A three-module programme that is focused on building capacity in their own business, shifting performance and changing behaviours using human factors principles.

### Module 1: Observe and Assess

We identify what works well and the obstacles to better safety performance. We assess and uncover what drives the way people behave in your organisation using a diagnostic tool to engage people in thinking about the barriers to performance.

### Module 2: Achieving Better Safety

We develop your safety performance blueprint – a programme of improvements, building on investments you have already made, to overcome and sustain better safety performance.

### Module 3: Training

Delivered by our trained facilitators our training and engagement module allows you to establish the capability within your organisation to sustain better safety performance and drive improvements.

## HOW CAN SLR HELP?

The challenge of sustaining performances is complex and ongoing in all companies; many companies are seeking ways in which to improve safety performance, many have invested in a range of programmes, systems and initiatives that aim to address safety, behaviours and human error.

The programme is aimed at companies who wish to tackle human error and safety behaviour for the first time or those who wish to build on the investments already made in this area.

The objective is as follows:

- Gain momentum for performance improvement
- Build in house capacity
- Build confidence that planned investments will support and sustain a shift in performance.
