

### Mounting of HJS/DAJOLKA City filter on VW T4 2,5TDI,

The CITY DPF for VW T4 2,5TDI is made by DAJOLKA from high-quality stainless-steel components from HJS Emissions Technology, and designed to replace the original catalyst plug&play. Item no. DPF-01.03.T4.PP  
After installed and registered at the car inspection, the vehicle reached emission level PM2, and can get the Green German Sticker, for driving into German environmental zones.

The DPF is delivered with mounting parts and German ABE approval according to StVZO.

The DPF installed on the car, replacing the original catalyst.

### Replacing the original catalyst with DPF

To replace the original catalyst with the DPF, the catalyst should be disconnected from the 3-bolt flange near the engine. The bolts can be very corroded, and heating and cutting can be necessary. And it should be disconnected in the assembly with the rear part of the exhaust system with the 2 silencers, which can also be difficult to disassemble. It might be easiest and fastest to uninstall the complete exhaust system, and work with that on the ground. See photo below.

Complete exhaust system on the ground. With original catalyst (left), and with DPF (Right)

DAJOLKA's VW T4 2,5TDI 102hp ACV, year 1998, with DPF and Green Sticker.
