### Linux Server Administration

Debian/Ubuntu-Based Systems (with GUI)	100%
Ubuntu-Based Servers	80%
BASH Scripting	40%
Security Practices	60%
Nginx Experience	60%

## SERVER EXAMPLES

### TeamSpeak Server Hosting

10/2015

<https://www.tsviewer.com>

This server in particular is fairly new, as I retired my previous ones. I host it on Ubuntu Server 14.04, with a MariaDB. I used to have the default MySQLite on the old server, but found that MariaDB is much easier to manage and support. I have most experience with Linux. I host a number of other TeamSpeak servers for free, as I currently own a non-profit license. For those who need a server, I take away the worry about the price of VoIP clients. (This is starting to become irrelevant with the introduction of Discord.)

### MeYaoi Forums

03/2016

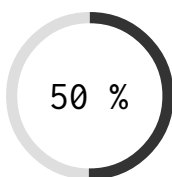

<http://themeforest.com/>

My first website was implemented for the general public. I wrote full documentation for everything I did. I worked with the game developer on how she would like it implemented and so forth. The website is free to use, so no security updates were implemented, but I did do an extensive security overhaul of the server when it was first created. This server has since been moved to another DO owned by MeYaoi (the username is MeYaoi, since it was requested that it remain unchanged).
