CONTENTS

I—PRELIMINARY; Physiography, Drainage, the Taita Hills, Communications 

II—OUTLINE OF GEOLOGY; Sequence and Stratigraphic Table, Age, Structure; Distribution of Basement System Sediments in Kenya 

III—THE ORTHO-GNEISSES AND THEIR ASSOCIATION WITH HORNBLENDE-SCHISTS 

IV—THE PARA-GNEISSES—
   (1) General 
   (2) Para-Gneisses Associated with Mzima Argillaceous Schists. Right Bank of River Tsavo 
   (3) Para-Gneisses occurring in the Central Part of the Tsavo Traverse 
   (4) The Maktau Hills 
   (5) Graphitic Gneisses, Athi River 

V—THE PARA-SCHISTS AND ASSOCIATED ROCKS—
   (1) The Mzima Bend Section 
   (2) Petrography of the Rocks of the Mzima Bend and the Loosoito Range 
      (a) The Quartzites 
      (b) Kyanite-quartz Schists 
      (c) Kyanite-graphite Schists 
      (d) Rocks of doubtful origin, akin to hornfels 
   (3) The Volcanic Sub-Group 
   (4) The Schist Series near Mgange, north-west of the Taita Hills 
      (a) Quartzites 
      (b) Graphite-Kyanite-Schists 
      (c) Compact Graphitic Rocks with Garnet 
      (d) Actinolite Schists 
   (5) The Crystalline Limestones 

VI—COMPOSITE GNEISSES OF THE TAITA HILLS 

VII—SUMMARY OF GEOLOGICAL CONCLUSIONS 

VIII—ECONOMIC MINERALS 

IX—REFERENCES 

APPENDICES

I—Graphite Deposits, Tsavo 
II—Kyanite Deposits, Murka 
III—Magnesite Deposits, Kinyiki 
IV—Other Mineral Deposits at Kinyiki—Asbestos, Quartz, Felspar, Vermiculite, Corundum and Sapphire, Miscellaneous Minerals 
V—Mica 
VI—Miscellaneous Minerals—Limestone, Clays, Rose Quartz, Copper, Kaolin, Minerals of the Taita Hill 

ADDENDUM 

Mineral Production Figures subsequent to the Report
