

ALAN'S DEGREE COURSE MENU – 500 IDEAS!

This list is based mainly on the first destinations of cohorts of students I have worked with over the past 10 years. It's not an exhaustive list and it's not fully up-to-date but it gives quite extensive coverage of the range of degree subjects available.

The list is in a sequential format, starting with Medicine and ending with the Visual Arts. In between it takes a 'guided tour' through healthcare, science, IT, engineering, social science, business, education, the humanities, languages, English, media and the creative arts. Subjects in **bold** are those which significant numbers have entered (45+) and those in **BOLD CAPITALS** are major subjects entered by substantial numbers of students (90+).

*Those courses marked with an asterisk may be NHS-funded.

The list contains all the major degree subjects that exist and most minor ones too, although it is slightly skewed by the fact that it is based on destinations of students living around the south coast of England. (So you will notice several different Marine courses included.)

For students who want to go to uni in UK but don't know what they want to study, the Menu can be a useful way to generate some ideas. Just go through it and tick or highlight anything that looks potentially interesting. For added effect, try double-ticking those that look VERY interesting and single-ticking those that look QUITE interesting. Then use the course search tool at ucas.com to identify unis that offer the courses or combinations that interest you.

When you have done this, remember that:

- Many subjects can also be studied together as Joint or Combined courses - and it's not unusual for students to combine subjects that are quite diverse
- Some subjects are available with a placement year or a year in Europe
- Some subjects are available with a Foundation Year for applicants without the required A-Levels.
