

World Habitats

Do you remember the world habitats we researched last lesson?

Rainforest

Arctic

Ocean

Desert

World Habitats

What are ocean habitats like?

Can you remember some plants or animals that live here?

Dependency

Living things in a habitat **depend** on each other. This means they need each other to stay alive.

Squirrels and oak trees are part of a woodland habitat.

Why might this squirrel need an oak tree to stay alive?

Food: Acorns are a squirrel's favourite food.

Safety: Living high in an oak tree gives squirrels protection from foxes and badgers, and gives them a safe place to have babies.

Shelter: The oak tree protects the squirrel from the wind, cold and rain, and bigger animals.

Dependency

Why does an oak tree need a squirrel?

The oak tree needs the squirrel to **spread its seeds**.

The squirrel collects lots of acorns, and buries some to save for later.

It carries them far away from the tree and hides them under the ground, away from other animals.

Sometimes the squirrels forget to go and dig them up again.

These acorns grow into new oak trees.

Dependency

The squirrel needs the oak tree for **food and shelter**.

The oak tree needs the squirrel to **spread seeds** so new trees can grow.

The oak tree and the squirrel **depend** on each other. This means they need each other to stay alive.

Dependency

Why do foxes need squirrels?

Foxes **eat** squirrels.

Why do foxes need oak trees?

If there were no oak trees, there would be fewer squirrels, so there would be less food for the foxes.

Dependency

Can anyone think how the foxes are helping the oak trees?

If there were no foxes, there would be more squirrels.

The squirrels might eat all of the acorns and then no new oak trees could grow.

All of the living things in this habitat depend on each other to survive.
