 Comparing Minibeasts

Spiders have 8 legs but snails do not have any legs. Spiders make webs with silk but snails leave slime on the ground. Snails have shells but spiders do not. Snails eat leaves but spiders eat insects and birds. Snails live in dark and damp places but spiders live in grass and water.

Spider Snail

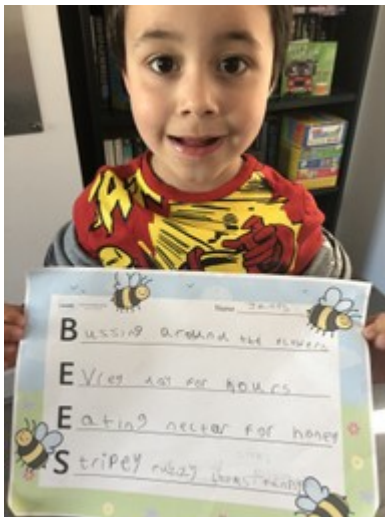

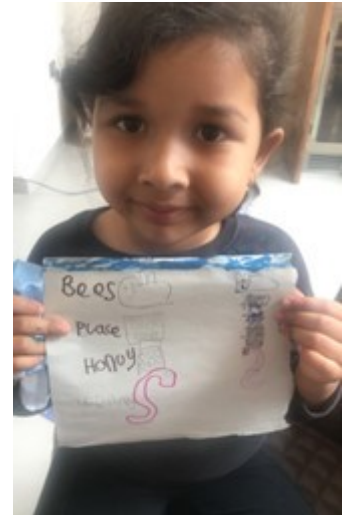

3
 24.04 Compare: butterfly & spider

Similarities

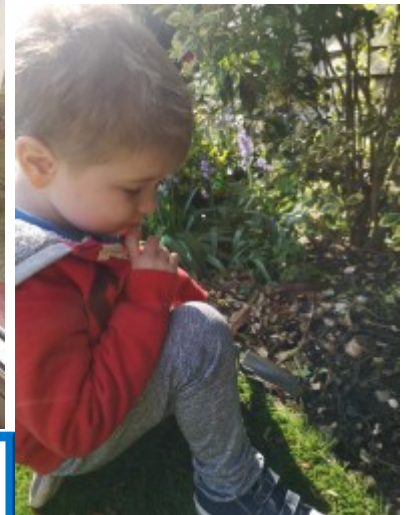

1. They are BOTH minibeasts
2. they LIKE to eat.
3. They are SMALL.

Differences

1. spider has 8 legs. butterfly has 6.
2. spider has NO wings.
3. spider has NO antennae.
4. BUTTERFLY

Gioia found a little snail on her window at home!

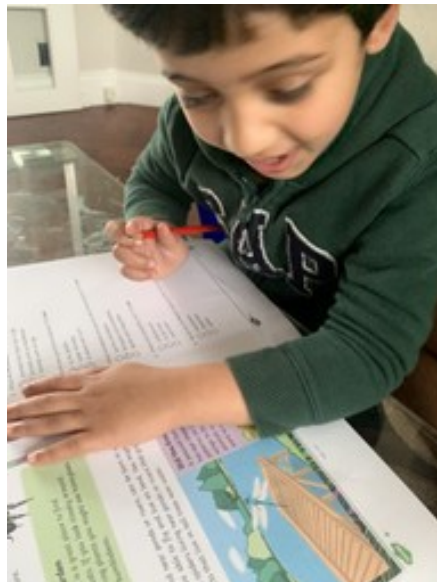

James R wrote a rhyming acrostic poem.

We have been learning more about minibeasts this week, writing fact files, poems, sorting them into groups, answering questions about them and finding more of them outside or in our houses!

James C looked for minibeasts in his garden.

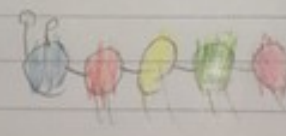

27.4.2020
 Mini-beast
 Experiment
 we think minibeasts like wet places.

what we did

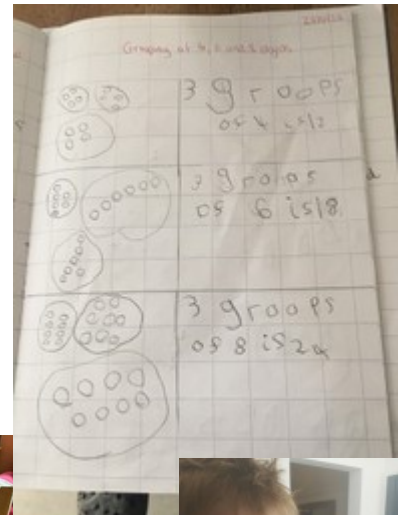

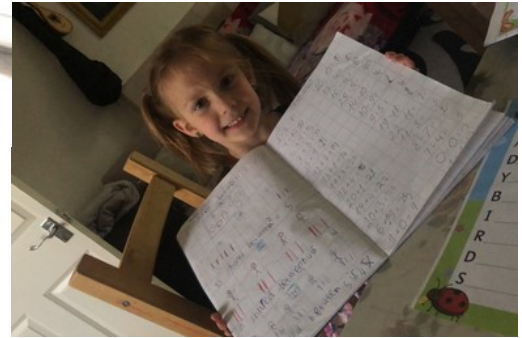

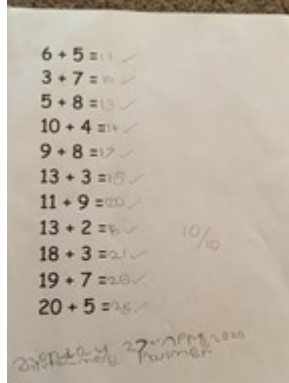

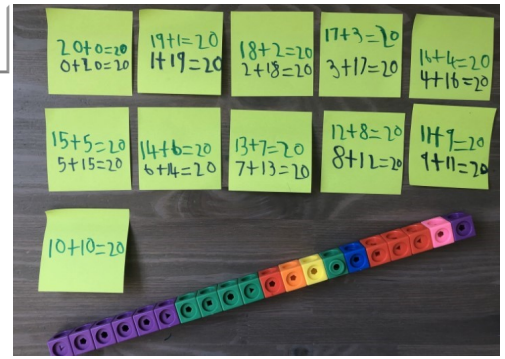

Caterpillar facts

- caterpillars can reach 14cm in length
- they are small and wiggly
- They eat plants such as leaves
- They come in various colours

Reception

In maths we have been looking at grouping and sharing different amounts and also number bonds to 10 and 20. Well done for really impressive effort everyone :)

Happy birthday to Harry! We all hope you had a fantastic birthday

Reception children have been busy with lots of other activities such as cooking, art work and enjoying the outdoors.
