

Data Security and GDPR

How to secure your data and become compliant?

The arrival of the new regulation is the ideal opportunity to take stock of your Information and data management systems.

The life cycle of data, the Information System and GDPR

The aim here is to give you an overview of what GDPR entails for your company. GDPR concerns the whole data life cycle across your Information System. SSL247® commits to help you ask the right questions and to guide you in managing these changes.

Companies need to adopt an approach which encompasses the whole company and outlines what to do when leaks occur. GDPR has been introduced to help companies be better equipped with ensuring data security, with employee training, process documentation and ultimately the development of a comprehensive technological ecosystem.

In response to this new regulation, SSL247® (Web Security Consultants) and Thales e-Security (Data Security) are uniting to merge their expertise and to guide you through these new industry regulations.

GDPR, Are You Ready ?

Given the fines promised by GDPR and the impending threats to data security, it is important to ask the right questions right from the beginning. Are you wondering if it is worth having an audit for your company? Here are some questions to ask yourself:

- Am I certain that I am handling personal data correctly? Yes/No
- Do you know where this data is stored, regardless of usage? Yes/No
- Do you have processes for all stages of data storage and usage? Yes/No
- Do you think that customers data security is considered a priority in your company? Yes/No
- Have you examined your risk management process for personal data? Yes/No
- Do you have a process for detecting and monitoring data leaks? Yes/No

If your response to any of these questions is no, this means your company is not GDPR compliant and we would recommend scheduling an audit to reduce the risk to your customers, your company and its brand image.

The HealthCheck Solution

SSL247®, in partnership with Thales e-Security, is offering your help and guidance on the following:

- Process compliance
- Implementation of “privacy by default”
- Detection of breaches
- Respecting the different rights of your customers, required by GDPR

THALES

CERTIFIED PARTNER

The audit process will take 5 days

Day 1-2: on site examination of your Information System.

Day 3-4: we will carry out specialised research and report our findings

Day 5: on site presentation of the results, work group, project plan and future plans.

Achieve GDPR compliance and customer data security with SSL247®, in partnership with Thales e-Security, by way of an audit and by implementing cutting-edge technology.
